ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., JANUARY, 1920. No. 1.

GENERAL SUMMARY.

There was no unusual feature about the temperature means and extremes for January, 1920. The temperatures were generally equable and mild for the season although the average was below normal. The average precipitation was 50 per cent above normal and nearly all of it fell as rain. It had an uneven geographical distribution as the totals ranged about ten and one half inches. The light totals occurred in the northern portion where a few negative departures were noted, but the totals increased southward with positive departures predominating. The distribution over the month was satisfactory but the daily amounts on the 8th, 21st, 22d, and 23d were heavy. Considerable sleet was reported over the State on the 5th, 6th, 21st, and 22d. Bad roads and wet soil kept down outdoor activities and clearing of land and caring for stock were the main farm operations during this month Fruit and winter grains were in a satisfactory condition at the close of the month. T. G. S.

TEMPERATURE

The average January temperature for 54 stations in Arkansas was 39.6°. For 43 stations having a record of ten years or more the mean was 1.7° below normal. The highest monthly mean was 45.8° at Junction, Union County; the lowest, 34.8° at Gravette, Benton County, Dodd City, Marion County, and Bentonville, Benton County. The highest temperature observed during the month was 82° at Dardanelle, Yell County, on the 20th; the lowest, 11° at Bergman, Boone County, on the 4th and 10th. The greatest daily range was 49° at Dardanelle on the 20th. The highest temperatures generally occurred from the 19th to 21st and the lowest from the 1st to 5th or on the 10th.

PRECIPITATION

The average January precipitation for 71 stations in Arkansas was 6.49 inches. For 56 stations having a record of ten years or more the average was 2.09 inches above normal. The greatest monthly total was 12.83 inches at Booneville, Logan County; the least, 2.27 inches at Bentonville, Benton County. The greatest amount for 24 consecutive hours was 5.10 inches at Osceola, Mississippi County, on the 8th. The average number of rainy days was 8. The average snowfall for all stations was 0.8 inch; for 27 stations reporting 0.1 inch or more, the average was 2.1 inches. The monthly amounts of snowfall ranged from 8.7 inches at Bentonville to none at nearly all southern stations. The major portion of the precipitation fell from the 6th to the 9th and from the 21st to 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Junction Randolph La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark. Jelks, Patterson Ark.

Daily Precipitation for January, 1920.

LITTLE ROCK, ARK.
WEATHER BUREAU OFFICE
June 9, 1920.

Departure of the Mean Temperature from the Normal, February, 1920.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., FEBRUARY, 1920. No. 2.

GENERAL SUMMARY.

The temperatures throughout the month were generally mild, only a few comparatively low temperatures occurring locally in the northern mountaincus sections. All departures from the normal were positive. The extremes were not record-breaking but showed a large range. The precipitation averaged about one-third of the normal amount, all departures being negative. The lighter totals fell in the northern districts where much of it was snow; the heavier in the southern portion where very little snow fell. The daily amounts were light and scattered over the month. Clearing, lumbering, and marketing could be carried on most of the time but ploughing was retarded by frozen ground and some snow. At the close of the month winter grains were in good condition, fruit safe and spring work about normal. Soil conditions and dirt roads improved considerably throughout the month. T. G. S.

TEMPERATURE

The average February temperature for 54 stations in Arkansas was 45.0°. For 43 stations having a record of ten years or more the mean was 3.2° above normal. The highest monthly mean was 51.9° at Huttig, Union County; the lowest, 39.1° at Nail, Newton County. The highest temperature observed during the month was 79° at Prescott, Nevada County; the lowest, —2° at Dutton, Madison County. The greatest daily range was 50° at Calico Rock on the 17th. The highest temperatures generally occurred from the 19th to 21st and the lowest on the 16th.

PRECIPITATION

The average February precipitation for 70 stations in Arkansas was 1.26 inches. For 55 stations having a record of ten years or more the average was 2.15 inches below normal, The greatest total was 3.18 inches at Eldorndo, Union County; the least, 0.35 at Gravette, Benton County. The greatest amount for 24 consecutive hours was 2.00 inches at Marianna, Lee County, on the 10th. The average snow-fall for all stations was 1.0 inch, the totals ranging from 8.0 inches at Bergman and Dodd City to none at most of the southern stations. The rains were general on the 10th, 14th, and 28th, on which dates the major portion of the precipitation fell.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete
ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],appe
in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Jun
Randolph La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark. Jelks, Patterson Ark.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., MARCH, 1920. No. 3.

GENERAL SUMMARY.

Although there are marked differences in individual temperatures, and the precipitation totals very considerably in different sections of the State, the averages do not show a great departure from the normal in either. A majority of the stations show positive precipitation departures, the only negative being in the eastern and south central counties, and while the temperature as a whole was below normal, positive and negative departures occurred in all sections.

Temperatures were below normal the first half of the month, the lowest ever recorded so late in the spring occurring at several stations on the 7th. This cold weather retarded but did not kill fruit except possibly in a few localities, but farm work was stopped except in southern counties. By the middle of the month temperatures were again normal and remained slightly above the latter half.

Heavy rains the latter part of the month again interfered with farm work and brought flood stages on the White, Black, Petit Jean, Ouachita, and at a few places on the Araknsas. but little damage resulted except that some lowland corn was drowned out.

High winds were reported in most sections of the State from the 11th to the 16th and again from the 25th to the 28th. A destructive hail storm occurred at Fort Smith the 31st.

The Aurora Borealis was observed the 22nd, from about 9:00 p. m. to 9:30 p. m. at Booneville, Grannis, Little Rock, Lutherville, Ozark, Searcy and Warren.

Dust was very noticeable in the atmosphere at Waldron on the 19th, and at Calico Rock and Little Rock on the 27th.

W. C. H.

TEMPERATURE

The mean temperature for 54 stations in Arkansas was 51.5°. For 41 stations having a record for 10 years or more the mean was 1.5° below normal. The highest monthly mean, 57.6° was recorded at Junction, Union County; the lowest, 43.0° at Booneville, Logan County, and at Nail, Newton County. The highest temperatures 88°, occurred on the 27th at Eldorado, Union County, and at Lutherville, Johnson County; the lowest, 2°, on the 7th at Nail. This is within one degree of the coldest ever recorded in Arkansas in the month of March, the lowest being 1° on March 6, 1899 at Gravette, Benton County. The greatest daily range was 47° on the 20th at Mt. Ida, Montgomery County.

PRECIPITATION

Most of the March precipitation fell in five periods; 3-4, 10-12, 16-19, 24-26, and on the 31st. The average for 68 stations was 5.44 inches; for 53 stations having a 10 year record or longer, it was 5.31 inches which is 0.53 inches more than the normal. The greatest monthly amount was 8.57 inches measured at Mt. Ida; the least 1.93 inches at Georgetown. The greatest 24 hour fall was 5.27 inches at Waldron, Scott County, on the 24th and 25th. Snow fell in the northern and some western counties.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Junction Randolph La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark. Jelks, Patterson Ark.

Daily Precipitation for March, 1920.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

APRIL 1920.

BY

HARVEY S. COLE
METEOROLOGIST

LITTLE ROCK, ARK.
WEATHER BUREAU OFFICE
July 23 1920.

Departure of the Mean Temperature from the Normal, April, 1920.

EPARTMENT OF AGRICULTURE, WEATHER BUREAU.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., APRIL, 1920. No. 4.

GENERAL SUMMARY.

nth of April was marked by unusually low tempera-
y station in the State except Rison recording freezing
n the 5th, and previous low records for April were
all sections. All stations with a full month's record
mean temperature below the April normal except
and Jonesboro which were normal, Wynne and Hope
ve departures.
ften the case during periods of low temperature the
ion was above normal, practically the entire State show-
e departures except the northern tier of counties and
ion occurred some place in the State every day except
nd 14th.
peaches, berries and all tender vegetation were either
reatly damaged by the freeze on the 5th still in a few
ocalities some fruit escaped. Apples were only slightly
and by the end of the month berries were blooming

s practcally all planted during the month despite the
weather and in the southern and central sections most
ton was in the ground, but for cotton the month as a
unfavorable and its condition at the close was only fair.
do of great intensity occurred in Yell, Logan, and John-
ies near midnight, Sunday, April 18th, during which
ives are known to have been lost, more than thirty peo-
d, and property damage to the extent of more than
00 sustained.
he most authentic information obtainable the storm was
l near Mickles, Yell County, about six miles east of
and from here the path of its movement was in a north-
direction crossing into Logan county near Hobart post-
e the first loss of life occurred. In Harkey Valley, Huckle
ntain, and the Shoal Creek neighborhoods ten people
lives; one entire family of seven being instantly killed.
istance northwest of Hobart the path turns northeast-
crosses the Arkansas River a little south of Piney sta-
son County. The first damage done in Johnson County
estruction of the bridge spanning Piney creek. The
tinued in a northeasterly direction passing over Piney
then turning northward which course it followed into
tains where it seems to have lost its force for no futher
was reported. In southeastern Johnson County eight
lost.
ndo's path was about a quarter of a mile in width and
in path swept everything before it. It is descrided as
well defined funnel-shaped cloud with rotary winds
rooted trees and carried everything away.

W. C. H.

TEMPERATURE

an temperature for 57 stations was 59.8°. For 43 sta-
ng a record of ten years or more the mean was 1.4°
mal. Of the stations having a complete month's record
showed the highest mean temperature, 63.3° and Nail,
tay missing. the lowest, 50.9°. The highest temper-
rded during the month was 94° at Bee Branch on the
lowest 21° at Nail on the 5th. The coldest hereto-fore
during the month of April was 19° in 1868, 1899, 1914,
The greatest daily range was 50° at Calico Rock.

PRECIPITATION

For 70 stations the average precipitation was 5.49 inches. The average for 45 stations having a record of ten years or more was 0.89 above normal. Of these 41 showed plus departures, 14 minus. The greatest monthly amount was 10.56 inches at Helena; the least 1.42 inches at Hardy. The greatest 24 hour fall was 4.30 inches at Centerpoint on the 25th. Snow in appreciable amounts was recorded at three stations and traces at most stations in the northwestern half of the State.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Junction, RandolphLa.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark.

Daily Precipitation for April, 1920.

Departure of the Mean Temperature from the Normal, May, 1920.

. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., MAY, 1920. No. 5.

GENERAL SUMMARY.

e outstanding characteristic of Arkansas' weather during nonth of May was the positive departure from the normal in temperature and precipitation; all stations except Dodd Marion County, showing positive temperature departures ll except eight, postive precipitation departures. May 1892 907 each had 13 rainy days, exceeding this month by one, he cloudy days in 1892 were one more than this month's. greatest monthly amount of precipitation, 15.32 inches ured at Marshall, Searcy County, has been exceeded only during May, when 23.50 inches fell at Howe, (now Center-,) Howard County in, 1905.

eavy rains falling on wet soil in most sections of the State, ther with low temperatures the first half of the month, de- cotton planting and in the extreme eastern sections, very was planted even at the end of the month. Considerable nting was necessary because of poor seed but during the half of the month higher temperatures and more sunshine favorable and cotton made considerable improvement though quite grassy in most sections at the close of the month. wheat, oats, meadows, pastures, potatoes, and truck made actory advancement. The late frost in April together with rains and inadequate sunshine this month materially in- strawberries, only about half a crop being marketed.

W. C. H.

TEMPERATURE

e mean temperature for 58 stations in Arkansas was 70.8° 43 stations having a record of ten years or more the mean .8° above normal. The highest monthly mean was 75.6° at ig and Junction, Union County; the lowest, 65.5° at Nail, on County. The highest temperature during the month, 96°, red at Bee Branch, Van Buren County on the 24th at Junction, on the 27th. The lowest was 39° at Nail on 14th. The greatest daily range was 38° occurring at Berg- Boone County the 18th and also at Junction on the 1st.

PRECIPITATION

ain fell in the State of Arkansas every day during the month of the average for the 74 stations reporting being 8.16 inches. 3 stations having a 10 year record or longer, the average was inches above normal. The greatest monthly amount, 15.32 es, was measured at Marshall, Searcy County, the least 2.12 s, at Fort Smith, Sebastian County. The greatest 24 hour was 7.28 inches at Grannis, Polk County, on the 12th. No fell during the month.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., JUNE, 1920. No. 6.

GENERAL SUMMARY.

The month was colder and drier than normal but the means and extremes were not unusual. The precipitation averaged 80% of the normal amount. The heavier totals generally fell near the center of the State and the lighter along the northern border but geographical distrubition was rather irregular. About three fourths of the stations showed negative departures and the remainder positive. Rains were general from the 2d to the 4th, 17th to 20, and on the 22d and 23d and scattered on the 1st, 21st, and 30th. The warm peroids were from the 13th to the 17th, and the 26th to the 27th, and the cool from the 6th to 9th, and the 19th to the 24th. All temperature departures were negative except the one at Hope. The number of clear days and the percentage of sunshine were above the average. Planting and cultivation were delayed in the eastern districts the first part of the month, due to wet soil. Nearly all spring crops were from one to three weeks late at the beginning of the month. Clear days, sunshine, and light to moderate rainfall materially advanced crops and farm work could be carried on much of the time. At the close of the month agricultural interests were generally in a very good condition. Harvesting of winter grains was completed, much hay had been cut, early corn was nearly matured, cotton generally well cultivated although a little late, and rice was being irrigated.

A brillant meteor was reported at about 8:50 P. M. (90th meridian time) on the 8th at Newport, Little Rock, Waldron, Booneville, Grannis, and Fort Smith. The following is quoted from a report from Fort Smith and completely describes the phenomenon. An intensely brilliant meteor appeared at 8:49 P. M. at about an azimuth of 125° and moved across the southwestern sky toward the of S. S. E., to an azimuth of about 350°. It appeared at an altitude of about 55° and disrupted at about 45°. About 30 seconds after the explosion a rumbling report like a peal of thunder was heard, lasting ten seconds. A distinct dust cloud, resembling a wisp of cirrus, was visible for 18 minutes after the explosion and drifted opposite to the course of the meteor. The phenomenon was attended by a vivid, intensely white glare, that illuminated the sky, narrow at first and widening to 3° at the point of disappearance. Grannis reported the glow as lasting twenty minutes and observed the explosion. Waldron reports hearing a loud, long roar.

T. G. S.

TEMPERATURE

The avearge June temperature for 56 stations in Arkansas was 74.7°. For 45 stations having a record of ten years or more the average was 1.7° below normal. The highest monthly mean was 79.0° at Huttig, Union County; the lowest, 69.2° at Dutton, Madison County. The highest temperature observed during the month was 101° at Marked Tree, Poinsett County on the 26th; the lowest, 42° at Dutton, Madison County on the 24th. The greatest daily range was 43° at Ozark on the 30th.

PRECIPITATION

The average June precipitation for 70 stations in Arkansas was 3.41 inches. The average for 55 stations having a record of ten years or more was 0.93 inch below normal. The greatest monthly total was 8.26 inches at Conway, Faulkner County; the least, 0.63 inch at Dodd City, Marion County. The greatest amount recorded in twenty four counsecutive hours was 5.35 inches at Huttig, Union County on the 4th. The average number of rainy days was six.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appear in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark.

Daily Precipitation for June, 1920.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXV. LITTLE ROCK., JULY, 1920. No. 7.

GENERAL SUMMARY.

The month averages nearly normal being only slightly cooler l wetter than usual. Temperature departures were nearly nly divided between positive and negative and were irregular- listributed over the State. Generally the temperatures were orable for agriculture and health. The highest temperatures urred on the 3d and 24th, and the coolest periods were from 9th to 11th, and 27th to 28th.

Rain fell somewhere within the State every day during the nth but the average number of rainy days was not abnormal. st of the daily falls were good agricultural rains and were not vy enough to injure crops or to interfere with work. The graphical distribution of the rainfall and the departures from mal were irregular, but most of the heavier totals fell in the thern portion and the lighter in the northern.

Cotton improved throughout the month and at the close was generally good to excellent condition. Boll weevil activities reased in the southern part and in the southeast were serious. ly corn was practically matured and late was in excellent dition at the close of the month. Other crops were doing y well. It rained too frequently in a few localities for good ing weather, but otherwise agriculture and outdoor work were ried on under favorable weather condition.

T. G.S.

TEMPERATURE

The July mean temperature for 55 stations in Arkansas was 8°. For 45 stations having a record of ten years or more mean was 0.3° below norma. The highest monthly mean s 82.7° at Huttig, Union County; the lowest, 75.4° at Dut- , Madison County. The highest temperature observed dur- the month was 105° at Bee Branch, Van Buren County; on 24th; the lowest, 52° at Dodd City, Marion County, Dutton, dison County, and Gravette, Benton County, on the 9th. e greatest daily range was 39° at Bergman on the 11th.

PRECIPITATION

ne average July precipitation for 71 stations in Arkansas was 2 inches. The average for 56 stations having a recordof ten years more was 0.43 inch above normal. The greatest monthly to- was 8.40 inches at Brinkley, Monore County; the least, 0.85 h at Bergman, Boone County. The greatest amount recorded ny twenty four consecutive hours was 4.70 inches at Prince on the 6th. The average number of rainy days was seven.

CORRECTIONS

March, 1920: Grannis mean minimum should be 38.8°: monthly mean should be 50.8°.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appear in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post office addresses of these stations as follows:- Junct Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark., Umphers, Rover, Ark.

Daily Precipitation for July, 1920.

LITTLE ROCK, ARK.
WEATHER BUREAU OFFICE
January 7 1921.

Departure of the Mean Temperature from the Normal, November, 1920.

. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

XXV. LITTLE ROCK., NOVEMBER, 1920. No. 11.

GENERAL SUMMARY.

November, 1920, is compared with November, 1919, quite a ast is found. This month was considerably cooler and dri- an November a year ago, but by looking further into past ds it will be found that, despite the decided deficiency in temperature and precipitation in 1920, there have been r and drier Novembers in Arkansas, for all extremes are n the limits established by previous years. With the excep- of about one week in October, there have been few heavy since early in September. Outdoor work has been carried nder favorable conditions and farmers are well along with fall work. At the close of the month there was consider- cotton in the fields in some sections of the State but the ed picking is due to low prices and not to unfavorable ier.

W. C. H.

TEMPERATURE.

e monthly mean temperature for November was 47.8°, is 3.9° below the normal. All stations except Huttig, n County, showed negative departures. The highest month- an was 57.4°, at Huttig; the lowest was 41.7° at Dutton, son County. The highest temperature recorded during nonth was. 89°, at Hope, Hempstead County, on the 7th. owest was 10° at Dutton, Madison County, on the 13th. greatest daily range was 51° at Batesville, Independence ty, on the 19th.

PRECIPITATION.

e precipitation for the month of November averaged 1.95 s which is 1.47 inches below the normal. At most stations in xtreme southern counties the departures were positive but other sections they were negative. The greatest monthly was 5.78 inches measured at El Dorado, Union County; ast 0.21 inch, at Mountian Home, Baxter County. The st amount recorded in 24 consecutive hours was 3.30 inch- Fulton, Hempstead County, on the the 10th. A trace of fell at a number of stations but the measured precipitation ll rain. The average number of rainy days was 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in deter ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],appea in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junc Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for November, 1920.

Departure of the Mean Temperature from the Normal, December, 1920.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

Vol. XXV. Little Rock., December, 1920. No. 12.

GENERAL SUMMARY.

December was a comparatively mild month. A cold wave overspread the State on the 28th giving temperatures of 6° in the northern, and 19° in the central and southern counties, but during most other periods the values were near or above normal. Both the temperature and precipitation averaged above normal; the number of clear, partly cloudy, cloudy, and rainy days practically normal. The heavy rain on the 21st caused considerable rise in some of the rivers but none reached flood stage. The ground was well filled with moisture at the end of the month. Winter wheat, oats, and rye were in good to excellent condition. Stock fed on the range during the greater part of the month.

W. C. H.

TEMPERATURE.

The monthly mean temperature for December was 43.2° which is 1.2° above the normal. The highest temperature recorded was 74° at Texarkana, Miller County, on the 31st; the lowest 6° at Dutton, Madison County on the 28th. In most sections the lowest temperature occurred on the 28th but the highest occurred on different dates. Of the 52 stations having a normal 7 showed negative departures, the others positive.

PRECIPITATION.

The precipitation for the month of December averaged 5.95 inches which is 1.92 inches above normal. The departures were positive in practically all sections except the Northwest. The greatest monthly total was 9.19 inches, measured at Malvern, Hot Springs County; the least 2.14 inches, at Fort Smith, Sebastian County. The greatest amount recorded in 24 consecutive hours was 4.36 inches at Mount Ida, Montgomery County, on the 21st. Snow fell in the northern and western counties the amounts varying from 6 inches in Marion County to a trace in other sections.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark; Umphers, Rover, Ark.

Daily Precipitation for December, 1920.

VOL. XXV. LITTLE ROCK, ARK., ANNUAL, 1920. No. 13.

MAR 2 - 1921

GENERAL SUMMARY.

Considered as a whole the year 1920 was not abnormal and, t for the untimely cold spell in April and the rather heavy in in May, the year might be recorded as practically normal. he mean temperature for the State was 60.7°, which is 0.3° low normal. The annual means ranged from 55.4° at Dutton 66.2° at Huttig, the extremes from 105° at Bee Branch to ° at Dutton. The average precipitation was 54.28 inches, hich was 6.18 inches above normal, and the extremes ranged om 28.97 inches at Fort Smith to 73.02 inches at Huttig. The owfall averaged about 4 inches and ranged from 16 inches. Bentonville to none at some southern stations.

January and February were mild months, no unusually low mperatures being reported, and the precipitation averaged a- ut normal. The average rainfall during the growing season, arch to September, was 34.24 inches, which is 4.11 inches ore than the normal, most of this excess occurring in May. he spring months were cold and wet and farmers got badly hind with their work. Freezing temperature on April 5th did tensive damage to fruit and berries, and necessitated replant- g cotton. On April 18th a tornado occurred in Yell, Logan, d Johnson counties during which 18 lives were lost and prop- y valued at $100,000.00 was destroyed. In June there was less nfall, cotton was planted, and farm work of all kinds ad- nced. During August there was again too much rain and boll evil increased, but the damage was not so great as was at one he feared. Crops being late, warmth and sunshine were need- to bring them to maturity before frost. Fortunately favorable ditions prevailed during September and October and, with ry fall, most crops were harvested under favorable conditions, delays in most cases being due to poor prices and not unfa- rable weather.

There was an average of 90 days with 0.01 or more precip- tion and 9 months during which the precipitation depart- s were positive. Despite this excess, no floods of consequence urred on the rivers, but the dirt roads of the State were in bad dition more than the usual length of time. The Aurora Bore- was observed on the evening of March 22d and a meteor of re than usual brilliancy on June 8th. The last general killing t in the spring occurred April 5th at which time previous temperature records for April were broken. The first killing t in autumn occurred about November 3d, giving an average wing season of 211 days. For an agricultural state, Arkansas's ther during 1920 was, on the whole, favorable and the crop ds, peaches and berries excepted, were above those of an av- ge year.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],ap in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Ju Randolph, La.; Lutherville, R F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Monthly and Annual Precipitation for the Year 1920, with Departures from the Normal.

In the above table the departures from the normal temperatures are based on records from stations that have 10 years or more of observations.
Reference letters [a] [b] [c] appearing in the table indicate number days missing: [b] reprsents two days missing, etc.

Correction: Mena, mean temperature December, 1920, should be 43.0. Departure from normal should be +0.4. Number of rainy days should be 10.

CLIMATOLOGICAL DATA.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVI. LITTLE ROCK., JANUARY, 1921. No. 1.

GENERAL SUMMARY.

The mild conditions which characterized December continued roughout January, the mean temperature for the month be- 3.7° higher than that of December. This was the fifth con- utive month during which the mean temperature for this tion has been above normal and only twice during the past years has a higher January mean been recorded. The abso- e maximum, 85° at Centerpoint, Howard County, has not n exceeded in January's recorded, the previous maximum ng 82°.

There were short cold spells during the month, 6° occurring Benton County, but moderate temperatures and very little nfall were the rule. In the northwestern half of the State the w and sleet storm of the 13th did some damage to timber, de dirt roads impassable, and interfered with outdoor work a few days, but the month, as a whole, was unusually favor- e for all outdoor activities. By the end of the month a consid- ble amount of truck had been planted in the central and thern counties and preparations for planting were being de except in the extreme north. Wheat, oats, meadows, and tures were in good to excellent condition.

W. C. H.

TEMPERATURE.

The monthly mean temperature for the section, 46.9°, was ° above normal. The highest monthly mean, 57.1°, occurred Iuttig, Union County; the lowest, 40.5°, at Dutton, Madison nty. The highest temperature recorded was 85°, at Center- t, Howard County, on the 29th; the lowest, 6° at Gravette, ton County, on the 14th. All stations showed positive de- tures, the greatest being in Benton and Union counties.

PRECIPITATION.

The precipitation for the month of January averaged 2.07 nes which is 50% of the normal. All stations except Texar- a and Springbank showed negative departures. The greatest nthly total was 3.87 inches measured at Arkansas City; the t, 0.50 inch at Bald Knob and Newport. The greatest a- nt recorded in 24 consecutive hours was 2.00 inches at Ri- on the 13th. Considerably more than the usual amount of v fell during the month but it was confined almost entirely ne northwestern half of the State. The average was 3.6 inch- nd varied from 8.0 inches in Marion County to a trace in sett, Cross, and Arkansas counties.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],[d],[e],[f],[g] in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for January, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI. LITTLE ROCK., FEBRUARY, 1921. No. 2.

GENERAL SUMMARY.

The month as a whole was unusually mild, the average temperature being exceeded only twice since records have been kept in this State, and February, in connection with the two preceeding months, gives us a winter which is one of the four mildest of the past 31 years. During the first half of the month considerable farm work was done and all spring work was well advanced. On the 18th and 19, with high pressure covering the Mississippi Valley and the Plains, a LOW skirted the Gulf coast bringing Arkansas the greatest snowfall, with one exception, since state-wide records have been kept. In January, 1918, the snow averaged 17.4 inches, this month's 11.7 inches being the next heaviest on record. The snow-storm and low temperatures of the day following stopped all farm work and did some damage to fruit in the Fort Smith district, but with these exceptions, the low temperature was beneficial in that it checked the premature budding of fruit trees and the unseasonable advancement of vegetation, and the heavy snow covering left the ground in excellent condition for the coming crop. Practically all precipitation occurred from the 5th to the 10th and from the 18th to the 24th, the average number of rainy days being 6.

W. C. H.

TEMPERATURE.

The monthly mean temperature for February was 48.3°, which is 6.3° above the normal, all stations showing positive departures. The highest monthly mean was 58.9°, at Huttig, Union County; the lowest was 42.4° at Dutton, Madison County. The highest temperature recorded during the month was 85°, at Texarkana, Miller County, on the 24th and 25th; the lowest –3, at Dutton on the 20th. In most sections the highest occurred on the 13th or 14th; the lowest on the 20th. The greatest daily range was 48°, occurring at Hardy and Mammoth Spring on the 13.

PRECIPITATION.

The precipitation for the month of February averaged 3.59 inches which is 0.18 inch below the February normal. The geographical distribution was irregular but most of the heavier totals were confined to the central and east central counties. The greatest monthly total was 8.90 inches at Georgetown, White County; the least, 1.00 inch at Whitecliffs, Little River County. Much of the precipitation fell as snow, the average snowfall being 11.7 inches, the monthly totals varying from 24 inches in Logan and Scott counties to none in the extreme southeastern counties.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for February, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

UNIVERSITY OF ILLINOIS LIBRARY
APR 26 1921

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

L. XXVI. LITTLE ROCK, Ark., MARCH, 1921. No. 3.

GENERAL SUMMARY.

March opened with temperatures about 15° above normal and values remained near or above normal in most sections of State until the 28th. This condition, following an unusu- mild winter, advanced vegetation two or three weeks beyond average season, increasing the damage to be done by a later eze. In March, 1907, the mean temperature for this section was 9° which is the only March during the past 31 years with a her mean. The extremes showed a wide range but were with- he limits established by previous records.

The freeze of the 29th did considerable damage in the north- and northwestern counties, but the loss will not be so great was at first feared. In the Bentonville District all blooms and ng fruit were killed, but many late buds were left on apple s which, under favorable conditions, will open later. Berries e delayed and damaged somewhat by the freeze, but the loss not be great.

uring the first six days of the month little rain fell, but there- r heavy showers were frequent and an excess was measured practically all sections. These heavy rains brought most of the rs of the State to or above flood stages, but the damage was great except that incident to the delay in preparation and ting. At the close of the month most of the corn and some he cotton outside of the overflowed land were planted.

On the afternoon of the 17th a tornado occurred in Oil Trough tom, 10 miles west of Newport, demolishing dwellings, barns, sheds, and injuring nine people, the property damage be- estimated at $10,000.00. It seems that the tornado did not h the ground all of the time, but bounced along, the greatest nage being done on the Meadow Lake Farm.

hail storm occurred near Meto and Kerrs, Lonoke County, the 16th during which hail stones larger than hen eggs are orted to have fallen. Near Boles and Parks, Scott County, orm occurred on the 25th with stones as large as hen eggs and rey, White County, reports large hail stones on the 17th. le damage was done except to gardens.

W. C. H.

TEMPERATURE.

e monthly mean temperature for the section was 60.8°, which .3° above normal, all stations showing positive departures. e highest monthly mean temperature was 66.6°, recorded at rkana, Miller County; the lowest, 54.3°, at Nail, Newton nty. The highest temperature recorded during the month 92° at Prescott, Nevada County, on the 16th and at Texar- a on the 21st; the lowest, 18° at Dutton, Madison County, at Dodd City, Marion County, on the 29th. At practically all ions the lowest temperature occurred on the 29th, but the nest occurred on different dates. The greatest daily range was at Calico Rock on the 30th.

PRECIPITATION.

e precipitation for the month averaged 6.58 inches which is 3 inches above the March normal. Except at four scattered ions the departures were positive throughout the State. The test monthly total was 11.01 inches at Gravette, Benton nty; the least, 2.98 inches at Mena, Polk County. The great- amount recorded in 24 consecutive hours was 5.55 inches at vette on the 21st and 22d. The average number of rainy days nine.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete
ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c],appe
in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Jun
Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for March, 1921.

§§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI. LITTLE ROCK, ARK., APRIL, 1921. No. 4.

GENERAL SUMMARY.

The cold, rainy weather of March continued throughout most of April, a hard freeze occurring in the northern portion of the State on the 17th, freezing temperatures extending to the southern tier of counties. The weather was generally unfavorable for crops, corn and cotton in many localities having to be replanted. The berry crop was injured by the rain and cold weather and the lowlands were flooded the latter part of the month. Little fruit will be harvested in the northern half of the State on account of the late freeze.

During the afternoon and evening of April 15th, four tornadoes occurred in Arkansas. The most destructive of these started at Mineola, Wood County, Texas, at 12:45 p.m. with a funnel-shaped cloud, rotary winds, and a destructive path about 100 feet wide. This storm moved northeastward, increasing in intensity and size and crossed the Arkansas-Texas line at a point eight miles south of Texarkana about 4:00 p.m. Moving northeastward across Miller County, killing 16 people and doing property damage estimated at $175,000.00, the tornado crossed the Miller-Hempstead County line at Buzzards Bluff and continuing in a northeastly direction, cut a swath, varying in width from one-fourth to one and one-half miles. through the center of Hempstead County, Water Creek Church, Dolph, Jackajones, Marlbrook, and the Wallaceburg communities being the center of its fury. In Hempstead County 34 lives were lost and property damage estimated at near $1,000,000.00 sustained. Passing out of Hempstead County near the northeast corner, it struck the Mount Pisgah settlement about 5:30 p.m. killing one person. After passing Pisgah the storm abated and no further evidence of a twisting storm was found. At points precipitation was heavy and hail occurred on the north side of the path. Following the storm there was a decided drop in temperatures and a cold night added to the suffering of the injured.

Starting at 3;30 p.m. another smaller and less destructive tornado occurred in Yell and Pope counties which killed five people and did property damage estimated at $60,000.00. At 8:18 p.m. Marche, Pulaski County, was struck by a tornado and at 8:45 p.m. at Wrightsville, Pulaski County, still another occurred. In Pulaski County no people were killed, the property damage being estimated at $12.500.00.

Small tornadoes were also reported at Carlisle and Gould on the morning of the 26th, damage being estimated at $20,000.00 with no loss of life.

W. C. H.

TEMPERATUER.

The mean temperature for the month of April was 59.8° which was 1.1° below normal, practically all stations showing negative departures. The highest monthly mean was 66.8° at Huttig, Union County; the lowest, 54.0°, at Nail, Newton County. The lowest temperature recorded during the month was 22° at Nail on the 8th; the highest 91° at Huttig on the 27th. In some sections the lowest was recorded on the 11th, but in most sections the extreme came near the 17th and 27th. The greatest daily range was 46° at England, Lonoke County, on the 19th.

PRECIPITATION.

The monthly precipitation averaged 8.87 inches which is 3.02 inches above normal, an excess being measured at practically all stations. The greatest monthly total was 12.52 inches, measured at Conway, Faulkner County; the least, 4.54 inches, at Bentonville, Benton County. The greatest amount measured in 24 consecutive hours was 6.41 inches at Conway on the 26th. The average number of rainy days was nine.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:— 5th, 3; 6th, 13; 7th, 10; 8th, 2; 10th, 1; 12th, 1; 13th, 8; 14th, 20; 15th, 2; 16th, 4; 20th, 1; 21st, 11; 22d, 6; 24th, 1; 25th, 17; 26th, 12; 27th, 3; 28th, 4; 29th, 1; 30th, 2.

Solar Halos:— 9th, 1; 12th, 1.

Lunar Halos:— 20th, 1.

Dense Fog:— 6th, 1; 8th, 2; 14th, 1.

Light Hail:— 8th, 1; 12th, 1; 13th, 2; 15th, 8; 16th, 1; 25th, 2; 26th, 1; 27th, 1; 28th, 5; 29th, 1.

Moderate Hail:— 15th, 3.

Killing Frost:— Killing frost or freezing temperature on several dates in north portion, on 17th or 18th, in practically all sections except extreme south.

Corrections

February- Amity, mean temperature should be 46°; Dumas, mean temperature should be 50.6°; Marshall, total precipitation should be 4.84; Prescott, number of days with .01 or more should be 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appear in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVI. LITTLE ROCK, Ark., MAY, 1921. No. 5.

GENERAL SUMMARY.

If May 1921 is compared with May 1920 quite a contrast is nd with regards precipitation; May 1920 being one of the ttest on record while May 1921 is among the dry. During the st decade temperatures were below normal and most of the rain- l for the month occurred, only light scattered showers occur- g after the 11th. Practically no rain fell between the 15th and l, and during the last decade temperatures were unseasonably gh, the highest May temperatures on record being recorded at eral stations. The month as a whole was favorable for cotton, d corn was not hurt where properly worked, but it was too dry potatoes and truck and the berry crop was cut short by the y weather. Most of the rivers of the State were at or near flood ge at the close of April and on May 4th the White River levee oke near Mc Clelland, Woodruff County, flooding approxi- tely 110,000 acres in Woodruff, Monroe, and Prairie counties, owning live stock, destroying crops, and delaying farm work at least two weeks. An accurate estimate of the loss is not ilable.

W. C. H.

TEMPERATURE.

The mean temperature for the month of May was 69.7° which 0.7° above normal). The highest monthly mean was 75.6° at mas, Desha County; the lowest 64.3° at Dutton, Madison unty. The highest temperature recorded during the month s 99° at Texarkana on the 31st; the lowest 29° at Dodd City, arion County on the 3d. The extremes occurred on or near se dates in all sections. The greatest daily range was 47° annis, Pope County, on the 22d.

PRECIPITATION.

The average precipitation for May was 2.25 inches which is 3 inches below normal. The rainfall was light in all sections, wport, Jackson County, being the only station measuring an cess. The greatest monthly total was 5.49 inches, measured Higden, Cleburne County. No rain fell at Hot Springs, Gar- d County. The greatest amount measured in 24 consecutive urs was 3.78 inches at Higden on the 11th. The average num- r of rainy days was 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in deter ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appea in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junc Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for May, 1921.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

L. XXVI. LITTLE ROCK, Ark., JUNE, 1921. No. 6.

GENERAL SUMMARY.

survey of Arkansas's weather during June shows nothing unusual. Though the temperature and precipitation averd somewhat above normal, neither was record breaking, and ut the most noticeable feature was the large number of days 0.01 inch or more precipitation and the corresponding deency of sunshine.—Rain fell at one or more stations every day ng the month and as high as 18 rainy days were recorded in e sections. Generally speaking, the weather was favorable for ing crops, but the continued showers and cloudy days fad boll weevil development, the close of the month finding numerous in practically all southern counties and the danunusually menacing.

W. C. H.

TEMPERATURE.

e mean temperature for the month of June was 78.5° which 1° above normal; all stations except Dodd City, Marion ty, and Centerpoint, Howard County, showing positive deres. The highest monthly mean was 82.0° at Osceola, Mispi County; the lowest 72.8° at Nail, Newton County. The st temperature recorded during the month was 103° which red at Texarkana, Miller County, on the 3d and at Hardy, p County on the 12th. The lowest temperature recorded 46° at Hardy on the 8th, both extremes being within the s of previous records. The greatest daily range was 42° at y on the 8th.

PRECIPITATION.

e average precipitation for 71 stations was 4.84 inches which 0 inch above normal. The rainfall was near normal in most ns only a few stations showing large departures. The st monthly total was 12.03 inches, measured at Grannis, County; the least, 1.41 inches at Osceola, Mississippi y. The greatest amount measured in 24 consecutive hours .67 inches at Grannis on the 11th. The average number ly days was 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in deter ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appe in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows: June Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for June, 1921.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

L. XXVI. LITTLE ROCK, Ark., JULY, 1921. No.7.

GENERAL SUMMARY.

The weather during the month of July was hot and dry, the perature averaging 2.2° above normal and the precipitation 3 inches below, but these values are well within the limits of vious years. The dry weather following a rather wet June, favorable for cotton, causing it to put on squares and check- boll weevil, but weevil were numerous as far north as Law- ce and Independence counties, sections heretofore untouched. as too dry for corn and some damage resulted to the late crop northeastern counties, but the bulk of it escaped. A small ch crop was harvested under favorable conditions and most ers were favorably effected.

W C. H.

TEMPERATURE.

he mean temperature for the month of July was 82.0° which 2° above normal; all stations except Dodd City, Marion nty, showing positive departures. The highest monthly mean 88.2° recorded at Huttig, Union County; the lowest 76.4° ail, Newton County. The highest temperature recorded ng the month was 107° at Wynne, Cross County, on the and at Bee Branch, Van Buren County, on the 31st. The st was 54° at Dutton, Madison County, on the 23d. In most ions the highest occurred on the 31st and the lowest about 23d. The greatest daily range was 39° at Mountain Home, ter County, on the 23d.

PRECIPITATION.

he average precipitation for the State was 2.42 inches which 43 inches below the July normal. Although the geograph- distribution was irregular, most of the heavier totals are d in the southwestern sections with positive departures at a stations in the eastern and northeastern counties. The great- nonthly total was 5.46 inches measured at Fulton, Hemp- l County; the least 0.30 inch at Ozark, Franklin County. greatest amount measured in 24 consecutive hours was 2.80 es at Huttig, Union County, on the 13th. The average num- of rainy days was 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in det ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Ju Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVI. LITTLE ROCK, Ark., AUGUST, 1921. No.8.

GENERAL SUMMARY.

The temperature for August, 1921, was in decided contrast to at of August, 1920, the monthly mean being 2.4° above nor-l while that of the previous year was 2.6° below. The means August for 7 of the past 31 years have been higher than that the past month, but the temperatures were rather high dur-the entire month. Temperatures of 100° or more were re-ded at a number of stations from the 1st to the 7th and from 19th to the 25th, the highest recorded being 106°, which s not unusually high. Lower temperatures have been record-in August every year except three in the past 31 years.

The mean precipitation, 5.46 inches, is the greatest on record ce 1915 and has been exceeded but three times in August in past 31 years The 10.72 inches rainfall at Mount Ida, ugh heavy, has been exceeded many times The rains were eral and the amounts rather large from the 3d to the 16th, showers being light and scattering the remainder of the nth. There were slightly more than the usual number of udy and rainy days with the resulting deficiency of sunshine. A windstorm of more than usual severity occurred at Gra-te on the 5th, considerable corn, a number of trees, and e small buildings being blown down.

The rainy weather was very favorable for corn, rice, hay, po-es, sweet potatoes, truck and forage crops, but very unfa-able for cotton. Boll weevil and army worms were very de-ctive, causing the crop to deteriorate rapidly during the en- month.

TEMPERATURE.

The monthly mean temperature for the State, as indicated by stations, was 81.5°, the highest mean being 84.6° at Junction, lowest, 76.0° at Okay. The departure, as shown by 43 ions, was +2.4°, the departures being positive at all stations, l usually larger in southern and central than in northern por-ns. The highest temperature recorded during the month was ° at Booneville on the 5th and at Junction on the 20th and ; the lowest, 56° at Dodd City on the 8th.

PRECIPITATION.

The monthly mean precipitation for the 71 stations reporting August was 5.46 inches, the greatest at any station being 10.72 es at Mount Ida, the least, 0.37 inch at Junction. Amounts ix to eight inches were reported from the northeastern, cen-, west-central, and extreme northwestern stations, smaller a-nts being reported from the remaining stations, especially se in the southern counties. The greatest 24 hour amount 4.00 inches at Arkadelphia, several stations reporting near-s much. The average departure from the normal for the 52 ions having a record of ten years or more was +1.40 inch-most of the departures in the northern and central portions g positive, those in the southern being negative.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a, b, e, in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark

Daily Precipitation for August, 1921.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI. LITTLE ROCK, ARK., SEPTEMBER, 1921. No. 9.

GENERAL SUMMARY.

The month of September, 1921, was marked by unusually high emperature up to and including the 29th, every day being nor-al or above. The monthly mean, 79.6°, has not before been qualed during the past 31 years, 79.0° in 1911 and 78.5° in 912 being the next highest recorded. This was the fifth consecu-ve month with a positive temperature departure and April 1921 the only month with a mean temperature below normal since ovember, 1920 Higher temperatures than the extreme of 104° ave frequently been recorded during September, but never before ave temperatures been so continuously above normal. On the 0th a HIGH from the Northwest overspread the Mississippi alley bringing with it the first cool weather of the fall, Gravette eporting light frost with a temperature of 35°.

Rain fell at some point in the State every day during the onth except the 3d and the 24th, but the amounts were sel-om heavy and the weather was generally favorable for farm ork. Most of the cotton was open at the close of the month nd picking was in progress, the rice harvest was beginning, and her crops were being taken care of under favorable conditions.

On the afternoon of the 7th a tornado occurred in Oil Trough ottom, 10 miles west of Newport. A few barns and tenant ouses were blown down but the damage was not great.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determinated from e records of 55 stations, was 79 6°, the departure from the nor-al being +5.7° with all stations showing positive departures. he highest monthly mean was 83 8° recorded at Huttig; the west, 73.8°, at Nail and Dutton. The highest temperature re-rded during the the month was 104° at Huttig on the 2d and Jonesboro on the 5th; the lowest, 35°, at Gravette on the 30th. he highest occurred on different dates, but the lowest came the 30th in all sections. The greatest daily range was 38° Marked Tree on the 29th and at Gravette on the 30th.

PRECIPITATION.

The average precipitation, as shown by the record of 69 sta-ons, was 3.38 inches, which is only 0.05 inch above normal. he geographical distribution was irregular, but most of the avier totals were in the southern counties with the lighter in e northern. The greatest monthly total was 6.96 inches, mea-red at Arkansas City: the least, 0.67 inch, at Huttig. The great-amount measured in 24 consecutive hours was 3.43 inches at xarkana on the 25th. The average number of rainy days was 7.

Corrections: August 1921.
oneville, lowest temperature should be 67° on 7th.
llett. lowest temperature should be 63° on 29th.
ount Ida, greatest 24 hour precipitation should be 3.92 on 12th.
ail, clear, partly cloudy, and cloudy days should be 13, 10, 8.
ark, clear and cloudy days should be 9, 13.
ne Bluff, daily river stages 27th, 8.4; 28th, 7.9; 29th, 7.5; 30th, 7.2; 31st, 7.0.
n 8.6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete
ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app
in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Jun
Randolph, La.; Latherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for September, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI LITTLE ROCK, ARK., OCTOBER, 1921. No.10.

GENERAL SUMMARY.

The weather in Arkansas during the month of October was abnormal in that the rainfall was deficient, the average for the State as a whole being only 24% of the normal. This was not the driest October on record, October 1908 with 0.48 inch having that distinction, October 1891 with 0.65 inch being the second driest, and October 1921 with 0.72 inch the third. The dry weather was favorable for harvesting but it was too dry for fall plowing, but little being done, and the close of the month found little wheat, oats, and cover crops sown. Ranges were dry at the close of the month and the rivers of the State at low stages. The first killing frost of the season occurred at a few stations in the northwestern counties on the 8th, at others on 12th, 13th, and 14th, two stations in the southwestern counties reporting killing on the 13th. There was little damage as practically all vegetation had matured.

During the crop season just closed, April 1st to October 31st, the temperature averaged 1.4° above normal and 1.12 inches more than the normal precipitation occurred. Late frost in the spring cut the peach and apple crops short and cloudy rainy weather during July and August favored boll weevil development; otherwise the year was satisfactory.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 52 stations, was 61.6° which is 0.7° below the October normal. Positive and negative departures were noted in all sections, but generally the river valleys showed somewhat higher temperatures than the uplands. The highest monthly mean was 66.4° recorded at Texarkana: the lowest, 55.7°, at Corning. The highest temperature recorded during the month was 96° at Huttig and Texarkana on the 19th; the lowest. 27°, at Dutton on the 8th and 12th and at Gravette an the 12th. In most sections the lowest occurred from the 8th to the 14th, the highest on different dates.

PRECIPITATION.

The average precipitation, as shown by the records of 68 stations, was 0.72 inch, which is 2.28 inches below the October normal. The totals varied from a "Trace" at Patterson and Portland to 1.47 inches at Springbank, all sections of the State reporting less than the normal rainfall. The greatest amount measured in 24 consecutive hours was 1.25 inches at Arkadelphia on the 3d. The average number of rainy days was 3.

Correction: Bentonville, September.
Minimum temperature September 6th should be 63.
Mean minimum should be 65.9.
Monthly mean should be 76.1.
Eureka Springs: Days with 0.01 or more precipitation should be 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete
ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appe
in the table indicate number of days missing; for example, [a] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Jun
Randolph, La.; Latherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI. LITTLE ROCK, ARK., NOVEMBER, 1921. No.11.

GENERAL SUMMARY.

The outstanding features of Arkansas' weather during the month of November were the positive departures from the normal in both temperature and precipitation. During the past 31 years a mean temperature higher than 54.9° has been recorded only three times while the average precipitation, 5.35 inches, which is nearly two inches above normal, has frequently been exceeded.

Except in a few favored localities the dry weather of October continued until the middle of November at which time pastures and ranges were extremely dry, stock water scarce, the rivers of the State at very low stages, and forest fires were filling the air with smoke throughout the northern half of the State. Rain in sufficient quanities to break the drought occurred in a few localities on the 14th, but not until the 16th were they general. From the 16th to the 19th the fall was heavy throughout most of the State and from the 24th to the 27th moderate amounts occurred while during other periods the amounts were negligible. The number of rainy days was practically normal, the number of cloudy days slightly above normal, and the sunshine percentage correspondingly below.

During the afternoon and evening of November 17th two tornadoes occurred in Arkansas in which 11 people were killed, 39 or more injured, and near $20,000.00 worth of property destroyed. The first occurred in southern Polk County and followed a west east course, the principal damage being done about one mile west of Wicks where eight lives were lost in one home. The other started in Clark County, near De Gray, and moved northeastward across Hot Springs County into the southeast edge of Garland. Along this track three lives were lost. Both storms were very destructive when touching the earth, but seem to have bounced from place to place, not touching all the time.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 53 stations, was 54.9° which is 3.4° above the November normal. Positive departures are noted in all sections except Clay County, Corning's mean being 50.6° which is 0.2° below the November mean for that station. The highest monthly mean was 61.6 recorded at Huttig; the lowest, 49.9°, at Dutton. The highest temperature recorded during the month was 88° at Mount Ida on the 17th; the lowest, 17°, at Dodd City and Mountain Home on the 12th. The lowest temperature of the month occurred about the 12th in all sections and on that date killing frost was general throughout the State.

PRECIPITATION.

The average precipitation as shown by the records of 70 stations, was 5.53 inches, which is 1.96 inches above the November normal. The monthly totals ranged from 1.10 inches at Springbank to 13.77 inches at Searcy. With the passage of a LOW, Nov. 16th to 19th inclusive, the State's rainfall was excessive, over eleven inches being recorded at Conway and Searcy and six to eight inches at a number of stations. The greatest fall in 24 consecutive hours was 5.85 inches at Waldron on the 18th. The average number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete
ing section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app
in the table indicate number of days missing; for example, "[j] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Ju
Ga.; Lutherie, R. F. D. No. 2, Lonoke, Ark.; Springbank, Doddridge, Ark.; Umphers, Royer, Ark.

Daily Precipitation for November, 1921.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVI. LITTLE ROCK, Ark., DECEMBER, 1921. No.12.

GENERAL SUMMARY.

The month of December was marked by light precipitation d high temperatures. The average precipitation for December s frequently been less than during the past month, but the an temperature, 47.1°, has been exceeded only once since te-wide records have been kept. In December, 1918, the mean mperature was 47.6°, 0.5° higher than during the past month. e warm dry weather was favorable for outdoor work and en- led farmers to do considera le fall plowi Winter tr k was ntiful in central and southern portions of the State until the h when a cold wave, overspreading the State, brought tem- ratures ranging from 11° in the northwestern to about 25° in southern counties.

A tornado occurred near Clakedale, Crittenden County, about 00 p. m. December 23d during which six lives were lost, 15 rsons seriously injured, a plantation store building, cotton gin, rehouse, a number of residences, and 40 or more tenant hous- wrecked. The property damage in Arkansas is estimated at 50,000.

W. C. H.

TEMPERATURE.

The monthly mean temperature for the State, as determined the records of 55 stations, was 47.1°, or 5.0° above the De- ber normal, all stations showing positive departures. The hest monthly mean was 53.4°, recorded at Texarkana; the est, 41.4°, at Bentonville. The highest temperature record- during the month was 82°, at Mount Ida on the 13th; the est, 11°, at Dutton and Nail on the 25th. The greatest daily ge was 53°, at Dodd City on the 27th.

PRECIPITATION.

The monthly mean precipitation for 69 stations reporting in ember was 2.78 inches, or 1.31 inches less than the Decem- normal. Light snowfall was reported at a few northern and tern stations, but practically all the precipitation fell as rain. w scattered stations measured slightly more than the normal ipitation, but in most counties the month was drier than average. The precipitation totals ranged from 5.16 inches at nas to 1.35 inches at Magnolia. The greatest amount meas- l in 24 consecutive hours was 2.90 inches at Camden on the The average number of rainy days was 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in dete ing section means. T. Precipitation is less than 0.01 inch rain or melted snow ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Ju Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVI LITTLE ROCK, Ark., YEAR, 1921. No.13.

GENERAL SUMMARY.

The outstanding characteristic of the weather in Arkansas during the year 1921 was the positive departure from the normal temperature in all sections of the State. During only four months were negative departures recorded at any station and of the four, only two, April and October, showed a negative departure for the State as a whole. Several stations did not record a monthly mean below normal during the entire year. The average temperature was 64.2°, or 3.2° above normal, the annual means ranging from 59.0° at Dutton to 68.8° at Texarkana. All stations showed positive departures for the year, varying from +0.8° at Dutton to +8.1° at Dumas. This was the warmest year during Arkansas's Climatological History, the next warmest being 1896 with an average temperature of 63.0°. Although the annual mean is considerably above normal the extremes were well within the limits established by previous years, ranging from –3° in February to 107° in July. The average precipitation was 47.46 inches which is 0.47 inch below normal, the extremes ranging from 29.29 inches at Junction to 61.12 inches at Helena. The snowfall averaged about 15 inches and ranged from 27 inches at Waldron to none at a few stations in the southern border counties.

January, February, and March were unusually mild months and vegetation advanced two to three weeks beyond an average season. April was cold and rainy, generally unfavorable for all agricultural pursuits. On the 17th of April a hard freeze occurred in the northern portion of the State, freezing temperatures extending to the southern counties, damaging the berry crop, killing practically the entire peach and apple crops in the northern counties, and necessitating the replanting of considerable corn and cotton. May, June, and July were hot and dry, but in August and September cloudy rainy weather prevailed, favoring boll weevil development and considerable damage to the cotton crop resulted. October was more favorable, dry weather prevailing throughout the harvest season. During the crop season, April to October, the temperature averaged 1.4° above normal and the precipitation 1.12 inches above. The last general killing frost in the spring occurred about April 10th, the first in autumn, November 11th, giving an average growing season of 208 days. Killing frost occurred at a few stations in the northwest on October 8th, but was not general until the 11th of November at which time all crops had matured. There were no disastrous floods on the rivers during the year nor were the dry periods of prolonged duration except in the northwestern counties where little rain fell from September 26th until the middle of November. The drought interfered seriously with the germination of winter grains in that section.

On the 17th of March a tornado occurred in Oil Trough Bottom which did property damage estimated at $10,000. April 5th, four tornadoes occurred in the State. The most destructive originated in Texas and moved northeastward traversing portions of Miller, Hempstead and Pike counties. The others occurred in Yell, Pope, and Pulaski counties. The four storms killed fifty six people and destroyed property valued at about $1,300,000. On November 17th two tornadoes occurred, one in Polk County, the other in Clark and Hot Springs counties. During these storms eleven lives were lost and $20,000. worth of property destroyed. The passing of the LOW in which these tornadoes occurred brought excessive rains in Arkansas from the 16th to the 19th, eight to eleven inches being measured at several stations. December 23d, at Clarkedale, Crittenden County, a tornado occurred, killing six people and doing property damage estimated at $150,000.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters a, b, c, appearing in the table indicate number of days missing; for example, b represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark. * 27 or more days missing.

Monthly and Annual Precipitation for the Year 1921, with Departures from the Normal.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII LITTLE ROCK, ARK., JANUARY, 1922. No. 1.

GENERAL SUMMARY.

The mean temperature for the State during the month of January was 39.1° or 1.8° below normal; the average precipitation, 3.63 inches or 1.60 inches below normal. If the past month is compared with January, 1921, quite a temperature contrast is found, January, 1921, being the warmest since 1911, the temperature averaging 6.0° above normal and 7.8° higher than during the past month. Although the mean temperature was 1.8° below normal there were no low temperatures recorded, 10° at Bentonville and Gravette on the 19th being the lowest. Temperatures slightly below zero are usually recorded in the northwestern counties during January. The difference in precipitation between January of this year and last is not marked, both months being considerably below normal. Despite the fact that the precipitation was deficient last month, the number of rainy days is normal, the cloudy days decidedly above normal, and the sunshine correspondingly below. The weather was favorable for farm work in the southern counties, and more than the usual amount of plowing was done, but in the northern counties the ground was frozen most of the month. At the close of the month wheat and oats were in good condition except in the northwestern counties and fruit buds were still dormant.

A tornado occurred near Fallsville, Newton County, about 9:00 a.m. January 4th which killed three people, injured two, and did property damage estimated at $2,000. On January 7th, 9:00 a. m., near Jacksonville, Pulaski County, a tornado killed one negro and did property damage estimated at $5,000.

W. C. H.

TEMPERATURE.

The monthly mean temperature for the State, as determined from the records of 57 stations, was 39.1°, or 1.8° below the January normal, all stations except Bentonville and Fort Smith showing negative departures. The highest monthly mean was 53°, recorded at Junction; the lowest, 33.0° at Dodd City. The highest temperature recorded during the month was 74° at Hutton the 4th; the lowest, 10° at Bentonville and Gravette on the 19th. The greatest daily range was 49° at Mount Ida on the 14th.

PRECIPITATION.

The average precipitation for 72 stations reporting in January was 2.63 inches, or 1.60 inches less than normal, all stations except a few in the extreme south and one in the southeast reporting less than normal. The snowfall averaged 1.9 inches varying from 7.2 inches at Jonesboro to none at a few stations in the southern counties. The monthly totals ranged from 0.77 inch at Morrilton to 7.98 inches at El Dorado. The greatest amount measured in 24 consecutive hours was 2.66 inches at Patterson on the 11th. The average number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in defe
m ning s ction means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appea
ing in the table indicate number of days missing: for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Jun
tion, Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for Januasy, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII LITTLE ROCK, ARK., FEBRUARY, 1922. NO. 2.

GENERAL SUMMARY.

The month of February was marked by a mean temperature nd an average precipitation in excess of the normal, the past nonth being the warmest, with but three exceptions, since state-wide records have been kept. During the past eight years, 1915 o 1922, the mean temperature for February has been above normal. Temperatures of zero or below are usually recorded in he northwestern counties, but 10° at Gravette was the low-st recorded during February 1922. Although the temperature or the month as a whole was decidedly above normal, there were frequent changes from 25° above normal to 15° below. Precipitation fell from the 1st to the 6th, 14th to the 15th, nd from the 20th to the 28th, the bulk falling during the last period. Dirt roads were bad during most of the month, impass-ble in many localities after the 23d. Winter wheat and oats nade satisfactory progress during the month and at the close, potatoes, truck, and vegetables were being planted in the south-rn counties. Fruit buds were swelling but were not damaged y the freeze of the 28th.

W. C. H.

TEMPERATURE.

The monthly mean temperature for the State, as determined om records of 56 stations, was 47.8°, or 5.6° above the Feb-uary normal, all stations showing positive departures. There ere cold periods extending from the 6th to the 8th, 13th to he 16th, and 24th to the 28th inclusive, while from the 9th to he 12th and from the 18th to the 22d temperatures were 15° to 5° above normal. The highest temperature recorded was 84° Texarkana and El Dorado on the 14th. The lowest was 10° Gravette on the 7th. In most sections the highest occurred a-out the 10th or the 21st, the lowest on the 7th or the 16th.

PRECIPITATION.

The average precipitation for the State, as determined from cords of 73 stations, was 4.89 inches, or 1.61 inches more than e February normal. There were positive and negative depart-es recorded in both the northern and southern half of the ate, but most of the heavier totals occurred in the southern r of counties. A sleet and ice storm covered practically all ex-pt the extreme southern counties on the 28th, but there was ry little damage reported. The greatest monthly precipitation as 9.70 inches at Portland and the least was 1.70 inches at sceola. The snowfall averaged 1.5 inches varying from 5.5 in-es at Conway to none at some southern stations. The average mber of days with 0.01 inch or more precipitation was 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in de
m ning section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app
ing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates ‡‡Post-office addresses of these stations as follows:- Ju
tion, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for February, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII LITTLE ROCK, ARK., MARCH, 1922. NO. 3.

GENERAL SUMMARY.

The unusual features of the wether for March, 1922, were the eavy preciptation, the sleet storm and the high winds. The verage precipitation for the State was 8.58 inches. This a- nount was exceeded only twice in March in the past 31 years; nese were 9.84 inches in 1894 and 9. 76 inches in 1897. A heavy eet storm occurred on the night of February 28th and March st, one to three inches being reported in most central and north- rn portions. Three small tornadoes occurred the morning of ne 14th, at Arkansas City, Kenset, and Gethsemane, and two n March 30th, one near Crossett and one near Prescott. At rkansas City one person was killed and 10 injured, and prop- ty valued at $15.000 destroyed. At Kensett a tornado destroy- l one cottage and injured three persons, one fatally. The prop- ty loss was slight. At Gethsemane six persons were killed and ght injured, the property loss being estimated at $40,000. igh winds on this date did some damage in the eastern portion the State, one negro being killed and a few persons injured. n March 30th a tornado occured at Crossett in which roperty valued at $5,000 was destroyed and one occurred near rescott the same date in which slight property damage occur- d. No lives were lost or persons seriously injured in either orm The mean temperature for the State was less than a egree below normal and the departues at all stations were ther small. The highest temperature, 83°, has been exceed- every March but three since 1891. The rains were rather ght but frequent from the 1st to the 25th, heavy the remain- r of the month, making the soil too wet to work the entire ne except in the northwestern portion. Only a small amount corn and practically no cotton were planted, all farm work ing badly behind. Dirt roads were impassable in many portions d streams were high. All growing crops made excellent prog- s and at the end of the month were in good to excellent ndition.

TEMPERATURE.

The monthly mean temperature for the 56 stations was 51.7°, means ranging from 56.7° at Texarkana to 45.2 ° at Nail. e departure for the State was —0.9° the areas of positive d negative departures being unevenly distributed. Freezing mperatures occurred in all portions from the 1st to the 4th, lowest temperature for the month occurring at all stations this period The lowest temperature reported was 7° at Gra- te on the 3d. Other cold spells occurred about the 12th and m the 20th to the 22nd. The highest tempreature reported s 83° at Portland on the 28th.

PRECIPITATION.

The monthly precipitation for the 73 stations was 8.58 inches ich was 3,88 inches more than normal. The amounts were ve normal at all stations except Dutton, Fayetteville, and rk, in the northwestern portion. The area of heaviest pre- tation occurred over a broad area extending from the north- corner of the State southwestward to the Louisina border where from ten to fourteen and one half inches occurred. The amounts decreased rapidly from there northwestward, being from three to five inches over quite an area in that section. The greatest monthly amount reported was 14.59 inches at Marked Tree, the least, 3.24 inches at Fayetteville. The greatest 24-hour amount was 3.96 inches at Patterson on the 10th.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, ARK., APRIL, 1922. NO. 4.

GENERAL SUMMARY.

The unusual features of the weather for April were two small ornadoes, high winds from the 8th to the 11th, a dust storm in he extreme west on the 10th, and high water in the streams n the eastern portion of the State. A tornado occurred at Boughton on the 4th in which property valued at about $5,000 as destroyed. No one was seriously injured. On the 16th a ornado occurred at Dyer in which one person was killed and bout 8 dwellings destroyed. High winds occurred in all por- ons of the State from the 8th to the 11th and in some localities n other dates, doing considerable damage to timber and mall buildings including instrument shelters at four substations f the Weather Bureau. A dust storm was reported at rannis, Mena, and Waldron the afternoon of the 10th, the ust being so thick that the sun was partially obscured. The verage precipitation for the month was only 0.72 of an inch bove normal, but the rains fell on wet soil and were so dis- ributed that the soil was too wet the entire month except in the orthwest portion. The low lands in most eastern districts were verflowed making farm work in those portions impossible. t the end of the month some corn and a great deal of cotton ere still unplanted. Wheat, oats, meadows, pastures, potatoes, uit, truck and berries made excellent progress and by the last f the month were in good to excellent condition.

TEMPERATURE.

The monthly mean temperature for 54 stations was 63.5° hich is 2.3° above normal. The monthly means ranged from 8.2° at Huttig to 57.5° at Nail, the departures being positive t all stations having normals. The highest temperature re- orded was 90° at Huttig on the 7th, highest temperatures oc- urring at nearly all stations from the 6th to the 9th. The low- st temperature was 26° at Dutton on the 1st, lowest tempera- ures in western and southern sections being reported on the st, those in the northeastern portion on the 18th or 20th. he highest temperature recorded lacks 3° of being as high as ie average highest temperature for April and the lowest lacks of being as low as the average lowest temperature for the onth.

PRECIPITATION.

The average precipitation for 73 stations was 5.54 inches hich is 0.76 inch greater than normal. The rainfall was heavy n the southwestern counties and in the higher portions of the zarks north of the Arkansas River where six to twelve inches curred, the largest monthly amount being 12.81 inches at pring Bank. In central, extreme northeastern, north central, nd extreme northwestern portions the amounts were less than rmal at most stations and in most instances were less than ur inches. The smallest amount was 2.77 inches at Hardy. he greatest 24-hour amount was 6.15 inches at White Cliffs on ie 27th. Light to moderate local showers were reported at most ations on the 4th and 5th, from the 8th to the 11th, and from ie 15th to the 18th; heavy rains occurred in most sections from ie 24th to the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in deter mining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appear ng in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates ‡‡Post-office addresses of these stations as follows:- Junc tion, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for April, 1922.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY B. COLE, Meteorologist.

Vol. XXVII. Little Rock, Ark., May, 1922. No. 5.

GENERAL SUMMARY.

As a whole, May, 1922, was not an unusual month. With regards both temperature and precipitation the month was near normal and no record breaking extremes occurred. Although the precipitation was slightly less than normal, the number of rainy days, 11, was 3 above normal. This was due to the great number of local thundershowers, several stations reporting 10 or more during the month. The geographical distribution of the rainfall was irregular, but most of the heavier totals occurred in the southern and southeastern counties, the lighter in the northern. Showers, falling on wet soil in the eastern lowlands and in the southern counties, delayed farming operations and grassy cotton fields were the rule in those sections at the close of the month, while in most northern counties, the dry weather was favorable and work advanced accordingly.

A wind storm occurred at Dyer, Crawford County, near midnight of May 26th which wrecked a church, damaged several residences, and destroyed a number of barns and shade trees, the total damage being estimated at $10,000. This was not a tornado. Moderate hail fell at Huttig, Junction, Subiaco, and Dumas during the month, doing some damage to gardens and truck crops.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 52 stations, was 70.8° which is 1.6° above the May normal. Positive departures prevailed in all sections. The highest monthly mean was 77.0°, recorded at Huttig; the lowest, 64.4°, at Dutton. The highest temperature recorded during the month was 100° at Texarkana on the 11th. The lowest was 40° at several stations. The greatest daily range was 43° at Ozark on the 5th.

PRECIPITATION.

The average precipitation, as determined from the records of 53 stations, was 5.00 inches, which is 0.12 inch less than normal. The monthly totals ranged from 12.69 inches at Huttig to 1.57 inches at Corning. The greatest fall in 24 consecutive hours was 3.75 inches at Arkadelphia on the 21st. The average number of rainy days was 11.

Correction.

Morrilton, cloudy days March, 1922, should be 10.
Unity, cloudy days, April, 1922, should be 15.
Unity, greatest 24 hour precipitation, April, 1922, should be 2.37.
Warren, days with 0.01 or more precipitation, April, 1922, should be 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in de mining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], app ing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- J ion, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for May, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

L. XXVII. LITTLE ROCK, Ark., JUNE, 1922. No. 6.

GENERAL SUMMARY.

The month of June was marked by a mean temperature 1.8° a- e normal and an average precipitation 65% of the normal. No ord breaking extremes occurred, all values being well within the ords of previous years. Precipitation was deficient in the north- half of the State while in some southern and southwestern nties an excess was measured. May, preceding, was a month h a large number of rainy days and a corresponding deficiency sunshine. On June 1st crops were grassy and farm work was ewhat behind, so from an agricultural viewpoint, the defi- ncy in precipitation was unfavorable for early corn, but the hot, weather halted boll weevil development and enabled farm- to clean their fields. Temperatures were rather high from 9th to the 25th, being above normal every day. Midday tem- atures of 95° to 98° were recorded in all sections with 100° 104° in some localities. At the close of the month the agri- tural situation was generally satisfactory in the northern half he State while in the southern half the situation with regards ton was not so good. Rice, potatoes, truck, melons, and fruit re promising and, with continued favorable weather, Arkan- 's peach crop will be large.

W. C. H.

TEMPERATURE.

The mean temperature for the month of June, as determined m the records of 53 stations, was 78.6° which is 1.8° above rmal. Practically all sections showed positive departures. The ghest monthly mean was 82.5° at Pocahontas, the lowest 74.2° Gravette. The highest temperature recorded during the month s 104° at Bee Branch on the 14th; the lowest, 44° at Dutton the 4th. The highest occurred on different dates but the low- about the 3d or 4th throughout the State. The greatest daily nge was 46° at Dutton on the 22d.

PRECIPITATION.

The average precipitation, as determined from the records of stations, was 2.64 inches which is 1.44 inches less than nor- al. This was the driest June experienced in Arkansas since 14 when the average precipitation was only 1.00 inch. The nthly totals ranged from 0.32 inch at Marshall to 6.35 inch- at Murfreesboro. Departures were negative except in the south- n and southwestern counties where an excess of 2.00 inches as measured at a few stations. The greatest amount for 24 con- utive hours was 2.81 inches at Portland on the 29th. The av- nge number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in de section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appear table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Decatur, Ark.; Umphers, Rover, Ark.

Daily Precipitation for June, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, ARK., JULY, 1922. No. 7.

GENERAL SUMMARY.

The month of July was slightly above the 30-year average temperature and precipitation with no record breaking extremes recorded in any locality. The temperature excess was greatest in the northwestern and northeastern counties while other sections of the State both positive and negative departures occurred. The first eight days were cool, temperatures below normal throughout the State, but thereafter temperatures were normal or above. Precipitation was rather unevenly distributed, practically all stations in the Arkansas Valley, the west central counties, and along the northern border, measuring less than normal amounts with an excess in other sections. The weather was generally favorable for the growth of cotton and, as a rule, fields were clean and the crop well cultivated. The dry weather held boll weevil in check and the plants were maturing satisfactorily at the close of the month. In the west central counties it was too dry for corn, but in most other sections conditions were favorable. The weather was also favorable for truck, melons, cantaloupes, and peaches, large crops being harvested.

There were 14 clear days, 11 partly cloudy, and 6 cloudy, practically normal. Sunshine averaged about 70 per cent of the possible. The prevailing wind was from the south, averaging about 6.4 miles per hour. The maximum velocity recorded during the month was at Fort Smith, 53 miles per hour from the southeast on the 12th.

W. C. H.

TEMPERATURE.

The mean temperature for the month of July, as determined from the records of 53 stations, was 80.2° which is 0.3° above normal. Positive and negative departures were recorded in all sections The highest monthly mean was 83.2° at Subiaco, the lowest, 76.8° at Dodd City. The highest temperature recorded during the month was 106° at Subiaco on the 31st; the lowest, 48° at Dutton and Mount Ida on the 5th. The highest occurred during the last decade in all sections of the State, the lowest on either the 4th, 5th, or 6th.

PRECIPITATION.

The average precipitation, as determined from the records of 53 stations, was 4.12 inches which is 0.20 inch above normal. Monthly totals ranged from 0.96 inch at Mena to 8.90 inches at Marked Tree. Positive and negative departures were recorded in all sections except the west central counties where amounts were less than normal at all stations. The greatest amount measured in 24 consecutive hours was 3.75 inches at Fayetteville on the 11th. The average number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determi section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[e], appearing in table indicate number of days missing: for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Bande La.; Lutherville, R.F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for July, 1922.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

L. XXVII. LITTLE ROCK, Ark., AUGUST, 1922. No. 8.

GENERAL SUMMARY.

The outstanding characteristic of the weather in Arkansas ring the month of August was the deficiency in precipitation. e average for the State was 1.90 inches which is, with two ceptions, 1909 and 1913, the driest August experienced since te wide records have been kept. Temperatures were above rmal over the greater portion of the State, but no record break- extremes were recorded. A temperature of 100° or higher s recorded 17 days during the month at Ozark, Franklin unty, and with a monthly mean of 84.2°, 2.6° above normal, ark was the hottest station in the State.

The month was generally unfavorable for growing crops, be- too dry except in a few favored localities. Despite the hot y weather boll weevil activities continued, doing serious dam- e throughout the cotton growing sections of the State. Con- derable cotton was open at the close of the month and picking d begun. Late corn was injured by the dry weather, especially the uplands. All other crops were needing rain badly at the se of the month.

There were 18 clear days, 8 partly cloudy, and 5 cloudy, the mber of clear being above and the others below normal. Sun- ine averaged about 75% of the possible. The prevailing wind s from the south, averaging about 6 miles per hour. The max- mum velocity recorded during the month was at Fort Smith, miles per hour from the northwest on the 26th.

W. C. H.

TEMPERATURE.

The mean temperature for the month of August, as determin- l from the records of 56 stations, was 80 4° which is 1° above ormal. Monthly means were somewhat below normal through- ut the counties drained by the St Francis River, but in other ctions of the State, practically all stations showed positive de- artures. The highest monthly mean was 84.2 ° at Ozark, the west, 75.7° at Dutton. The highest temperature recorded dur- g the month was 111° at Hope on the 23d, the lowest, 51° Dutton on the 27th and 28th. The greatest daily range was 2° at Mammoth Spring on the 26th.

PRECIPITATION.

The average precipitation, as determined from the records of 2 stations, was 1.90 inches which is about 50% of the normal. he geographical distribution was very irregular with all stations xcept three showing negative departures. Monthly totals ranged om 8.43 inches at Marked Tree to 0.21 inch at Wynne, these tations being within about 30 miles of each other. The greatest mount measured in 24 consecutive hours was 7.63 inches at Marked Tree on the 23d. The average number of rainy days as 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Daily Precipitation for August, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVII. LITTLE ROCK, Ark., SEPTEMBER, 1922. No. 9.

GENERAL SUMMARY.

The warm dry weather of August continued throughout most September. Sunshine averaged about 82% of the possible and e number of rainy days was only 50% of the average for the ast 30 years. This was the driest September experienced in Arnsas since 1899 and only three times since state wide records ave been kept has so little rain fallen during the month. Hot y weather prevailed from the 1st to the 10th and after the 13th mperatures were generally above normal. On the 10th and th light rains occurred in most sections of the State and temeratures were near or somewhat below normal, Dutton reportg light frost with a temperature of 37°. From the 11th to the 0th a few light showers fell in widely scattered localities, but ter the 20th there was practically no rain. Rain was too light d too late to be of much benefit to cotton, and late corn, rice, stures, potatoes, and hay crops were damaged by the drought. the close of the month rice was ready to cut, cotton was nearall open and was being picked under favorable weather contions. Roads were good throughout the month. All rivers owed low stages.

There were 22 clear days, 5 partly cloudy, and 3 cloudy, the mber of clear days being 5 more than normal. The prevailing nd was from the south averaging about 5.4 miles per hour. e maximum velocity recorded during the month was at Little ck, 34 miles per hour from the southeast on the 15th.

W. C. H.

TEMPERATURE.

The mean temperature for the month of September, as dermined from the records of 53 stations, was 76.2° which is 3° above normal. All sections of the State showed positive drtures with the greatest recorded in Randolph County. The ghest monthly mean was 80.2° at Pocahontas, the lowest,) 3° at Dutton. The highest temperature recorded during the onth was 106° at Bee Branch on the 6th and at Bee Branch d Dardanelle on the 8th. The lowest was 37° at Dutton on e 12th. The greatest daily range was 51° at Mammouth Spring the 13th.

PRECIPITATION.

The average precipitation, as determined from the records of 2 stations, was 1.25 inches which is 2.08 inches less than the rmal for September. Monthly totals ranged from 5.89 inches at nesboro to a trace at Whitecliffs. The greatest amount meased in 24 consecutives hours was 5.57 inches at Jonesboro on e 1st. The average number of rainy days was 3.

Correction, August, 1922: Mammoth Spring, days 0.01 inch more precipitation should be 4. Marked Tree, mean minimum mperature should be 65.7°; monthly mean temperature 78.0°.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, Ark., OCTOBER, 1922. No. 10.

GENERAL SUMMARY.

The warm dry weather which characterized most of the summer and the preceding fall month continued through October. This was the seventh consecutive month during which the temperature has been above normal and the precipitation deficiency during this period is now over six inches. The dry fall has been very favorable for harvesting and for most outdoor work, but fall plowing is being delayed, ranges are in poor condition, and in some sections stock water is scarce. The rivers of the State showed low stages througout the month, the Arkansas at Little Rock being below zero the entire month, conditions at Calico Rock

PRECIPITATION.

The average precipitation for the State, as determined from records kept at 74 well distributed stations, was 1.47 inches which is 1.53 inches less than the October normal. Departures are negative in practically all sections. Monthly totals ranged from 4.35 inches at Pindall to 0.15 inch at Arlberg, stations less than 40 miles apart. The greatest amount measured in 24 consecutive hours was 2.85 inches at Danville on the 7th. The average number of rainy days was 4.

Correction: September 1922; Texarkana, precipitation entries ...ng date, 0.20 should be on 4th, 0.20 on 11th, 0.58 on 17th. ...ttig, lowest temperature should be 52° on 28th. Mena, number ... clear days should be 21, cloudy, 3. Waldron, number clear ...s should be 16, partly cloudy, 9.

CLIMATOLOGICAL DATA.

DEC 8 1922

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, ARK., OCTOBER, 1922. No. 10.

GENERAL SUMMARY.

The warm dry weather which characterized most of the summer and the preceding fall month continued through October. This was the seventh consecutive month during which the temperature has been above normal and the precipitation deficiency during this period is now over six inches. The dry fall has been very favorable for harvesting and for most outdoor work, but fall plowing is being delayed, ranges are in poor condition, and in some sections stock water is scarce. The rivers of the State showed low stages througout the month, the Arkansas at Little Rock being below zero the entire month, conditions at Calico Rock and Georgetown on the White, and at Dam No. 1 on the Little Red being practically the same.

There were 18 clear days, 6 partly cloudy, and 7 cloudy, all being normal. Sunshine averaged about 71% of the possible. The prevailing wind was from the south, averaging about 6 miles per hour. The maximum velocity recorded during the month was at Little Rock, 30 miles per hour from the northwest on the 7th.

W. C. H.

TEMPERATURE.

The mean temperature for the month of October, as determined from the records of 51 stations, was 63.1° which is 0.8° above normal. Six scattered stations showed negative departures, the others positive. The highest monthly mean was 67.0° at Texarkana, the lowest, 57.2° at Nail. The highest temperature recorded during the month was 98° at Rison on the 4th. The lowest was 20°, at Dodd City and Dutton on the 18th. The highest occurred within the first five days of the month in all stations, the lowest from the 18th to the 24th. The greatest daily range was 53° at Amity on the 25th.

PRECIPITATION.

The average precipitation for the State, as determined from records kept at 74 well distributed stations, was 1.47 inches which is 1.53 inches less than the October normal. Departures were negative in practically all sections. Monthly totals ranged from 4.35 inches at Pindall to 0.15 inch at Arlberg, stations less than 40 miles apart. The greatest amount measured in 24 consecutive hours was 2.85 inches at Danville on the 7th. The average number of rainy days was 4.

Correction: September 1922; Texarkana, precipitation entries during date, 0.20 should be on 4th, 0.20 on 11th, 0.58 on 17th. Ottig, lowest temperature should be 52° on 28th. Mena, number clear days should be 21, cloudy, 3. Waldron, number clear days should be 16, partly cloudy, 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.; Dam No. 1; Judsonia, Ark.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, ARK., NOVEMBER, 1922. No. 11.

GENERAL SUMMARY.

November, 1922, was unmarked so far as unusual weather is concerned. Neither the the temperature nor the precipitation extremes approached previous records and the means were near the normal values. The warm weather which characterized the preceding seven months continued throughout November making this the eighth consecutive month with a temperature above normal. Killing frost occurred in most sections from the 21st to the 26th, but did little damage as practically all crops were matured. As practically the normal rainfall occurred, the situation with regards soil moisture improved, and at the close of the month the soil was in excellent condition for fall plowing. Wheat, oats, meadows, pastures, and winter truck were in good condition.

There were 16 clear days, 6 partly cloudy, and 8 cloudy, all practically normal. Sunshine averaged about 64% of the possible. The prevailing wind was from the north, averaging about 7 miles per hour. The maximum velocity recorded during the month was at Fort Smith, 48 miles per hour from the west on the 12th.

W. C. H.

TEMPERATURE.

The mean temperature for the month of November, as determined from records kept at 51 stations, was 52.9° which is 1.4° above normal. Batesville, Bee Branch, Conway, and Harrison showed negative departures, all other stations positive. The highest monthly mean was 59.0° at Huttig, the lowest, 46.4° at Harrison. The highest temperature recorded during the month was 88° at El Dorado on the 4th. The lowest was 20° at Dutton on the 21st and 26th. The highest occurred within the first five days in all sections of the State, the lowest during the last decade. The greatest daily range was 46° at Mount Ida on the 8th.

PRECIPITATION.

The average precipitation for the State, as determined from the records of 72 stations, was 3.89 inches which is 0.32 inch above the November normal. The geographical distribution was rather irregular, with slightly heavier totals recorded in the northwestern counties. Monthly totals ranged from 8.82 inches at Lincoln to 0.86 inch at Texarkana. The greatest amount measured in 24 consecutive hours was 3.10 inches at Mena on the 13th. The average number of rainy days was 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determini section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in th table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolp La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Umphers, Rover, Ark.; Dam No. 1; Judsonia, Ark.

Daily Precipitation for November, 1922.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

OL. XXVII. LITTLE ROCK, Ark., DECEMBER, 1922. No. 12.

GENERAL SUMMARY.

The outstanding characteristic of the weather during Decemer was the positive temperature departure which was 5.7° aove normal. The month opened with temperatures 15° to 20° oove normal and unseasonably warm weather continued roughout the first 8 days. From the 9th to 20th temperatures ere near or somewhat below normal, from the 20th to the close the month above. Rain occurred in all sections during the rst week and showers were frequent to the 17th. From the 18th the 25th practically no rain fell, but after the 25th showers ere frequent. The rainfall and mild temperatures were very vorable for wheat, oats, meadows, pastures, and truck, all of hich made excellent progress throughout the month. Outdoor ork progressed satisfactorily.

There were 12 clear days, 5 partly cloudy, and 14 cloudy, all ractically normal. The prevailing wind was from the north veraging about 8 miles per hour. The maximum velocity reorded during the month was at Fort Smith, 34 miles per hour rom the northwest on the 27th. There was about 44% of the ormal amount of sunshine.

W. C. H.

TEMPERATURE.

The mean temperature for the month of December, as dermined from the records of 49 stations, was 47.8° which is .7° above normal. Positive departures were recorded at all staons, the greatest being 9.6° at England, Lonoke County. This as the warmest December since state wide records have been ept and was the eighth consecutive month of 1922 with a posive temperature departure. The highest monthly mean was 7.2° at Magnolia, the lowest, 42.0° at Nail. The highest temerature recorded during the month was 86° at Dutton on the th, the lowest 12° at Marked Tree on the 18th. The highest ccurred in all sections during the first decade, the lowest about he 18th or 19th.

PRECIPITATION.

The average precipitation, as determined from the records of 0 stations, was 5.17 inches which is 0.50 inch above normal. Ionthly totals ranged from 8.28 inches at El Dorado to 1.00 nch at Whitecliffs. The greatest amount measured in 24 conecutive hours was 3.95 inches at Pindall on the 27th. Nail reorted an inch of snow, Dutton a half inch, and Pindall a trace, hese three being the only stations reporting snow during the ionth. The average number of rainy days was 9.

Correction: Calico Rock, river stage November 30th should e –0.1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determin section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randol La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Timbers, Rover, Ark.; Dam No. 1; Judsonia, Ark.

Daily Precipitation for December, 1922.

ARKANSAS SECTION.

HARVEY G. COLE, Meteorologist

VOL. XXVII LITTLE ROCK, ARK., YEAR, 1922. NO. 13.

GENERAL SUMMARY.

Like the preceding year, 1921, the annual mean temperature for 1922 was above normal, all stations showing positive departures for the year, and all months except January and March were above normal. Only the years 1896, 1911, and 1921 were warmer than 1922. The mean temperature for the State was 62.7°, which is 1.7° above normal. The annual means ranged from 66.8° at Huttig and Texarkana to 58.0° at Dutton, the extremes from 111° at Hope on August 23d to 7° at Gravette on March 3d. The coldest weather of the year occurred at most stations during March. The average precipitation was 46.50 inches, which is 1.43 inches less than normal, the precipitation extremes ranging from 69.10 inches at Huttig to 32.02 inches at Morrilton. The lighter totals occurred in the northern counties and in the Arkansas Valley from Little Rock to Fort Smith, the heavier in the southern tier of counties. March, with an average precipitation of 8.58 inches, was the wettest month of the year; September, with 1.25 inches, was the driest. The greatest monthly total was 14.59 inches, measured at Marked Tree during March, the least, a trace, at Whitecliffs, during September. Of the stations reporting a measurable amount of snowfall, the average was about 4 inches, and amounts varied from 11.2 inches at Jonesboro to none at a number of southern stations.

January was a cold, dry month, one of the few Januarys of recent years with a temperature below normal. Unseasonably warm weather during February caused vegetation to advance and fruit buds to swell. Fortunately a cold snap, beginning February 28th with 1 to 3 inches of sleet covering the northern and central sections of the State, and freezing to the southern counties, halted development and most of the peach and apple crops escaped serious injury. March and April were above normal with regards precipitation and the lowlands of the State were flooded during April. Much corn and cotton had to be replanted and the strawberry crop was of poor quality due to the continued rains. May, while slightly below normal with regards precipitation, had a great many rainy days and the corresponding sunshine deficiency further delayed farming operations, June 1st finding all farm work badly behind. June was hot and dry, rather unfavorable for early corn, but favorable for cotton in that it halted boll weevil development and enabled farmers to clean their fields. The weather during July favored cotton growth, and cantaloupes, melons, and peaches were harvested under favorable conditions. August and September were unusually dry, and late corn was damaged considerably, especially in the uplands. The total precipitation for the crop season, March to September was 29.03 inches, which is practically normal, but the monthly amounts were very unevenly distributed being much heavier during the early spring than in the summer and fall. The temperature for this period averaged 1.2° above normal. Dry weather continued until near the middle of November and temperatures were above normal the remaining months of the year. In most sections of the State the last killing frost in spring occurred during the first decade of March, the first of Autumn from the 20th to the 26th of November, giving a growing season of approximately 257 days, fully 20 days longer than the average. There were 170 clear days during the year, 83 partly cloudy, 112 cloudy, and 87 with 0.01 inch or more precipitation. Sunshine averaged 6?% of the possible amount.

W. C. H.

WEATHER BY MONTHS.

January:— The month was marked by temperature and precipitation considerably below normal. During the past 17 years but four Januarys have been below normal with regards temperature and of these but two, January 1912 and January 1918, were colder than January 1922. The weather was favorable for farm work and more than the usual amount of plowing was done in the southern counties, but in the northern counties the ground was frozen most of the month. Although the monthly mean temperature was 1.8° below normal, no unusually low temperatures were recorded, 10° at Bentonville and Gravette being the lowest. At the close of the month wheat and oats were in good condition except in the northwestern counties where it was too dry. Fruit buds remained dormant.

February:— Unlike the preceding month, February was a month of unseasonably warm weather and precipitation in excess of the normal. With but three exceptions this was the warmest February on record and this is the 8th consecutive year during which the February mean has been above normal. While the temperature for the month as a whole was decidedly above normal there were frequent changes from temperatures above to temperatures below the seasonal average. The precipitation was confined principally to three periods, 1st to the 6th, 14th to the 15th, and from the 20th to the 28th, the heavier amounts occurring in the last period Dirt roads were bad the entire month, impassable in most sections the latter part of the month. All vegetation was advanced by the warm weather and fruit buds were beginning to swell at the close of the month, however a moderate cold wave, overspreading the State on the 28th, checked this development.

March:— March opened with temperatures 15° to 20° below the seasonal average and the temperature for the month as a whole was slightly below normal. Precipitation occurred during the cold snap the first of the month and by the evening of the 1st sleet and glaze covered a greater portion of the State stopping all outdoor work. This was the wettest month of the year and the monthly total, 8.58 inches, has been exceeded but twice during the past 31 years. The soil was too wet for plowing the entire month and only a small amount of corn and no cotton were planted, all farm work being badly behind. Wheat, oats, meadows, and pastures made excellent progress and were in good condition. Dirt roads continued impassable in most sections and the rivers were high at the close of the month.

April:— Temperature and precipitation were again above normal. While the average precipitation was only 0.72 inch above normal, the rain fell on wet soil and was so distributed that the soil was too wet the entire month. The lowlands of the lower Arkansas and White rivers were flooded, making farm work impossible, and at the close of the month some corn and a great deal of cotton were still unplanted. Hay crops, truck, and berries made excellent progress. High winds were reported throughout the State from the 8th to the 11th, doing considerable damage to timber and small buildings. A dust storm was reported at Grannis, Mena, and Waldron the afternoon of the 10th, dust being so thick that the sun was partially obscured.

May:— The month opened with temperatures somewhat below normal. Progress was made in planting cotton and corn in northern and western portions of the State but in the southern and eastern sections heavy rains interfered seriously with farm work. Temperatures were too low for cotton and it was decidedly

too wet for strawberries. Warmer weather set in the latter part of the first week and a week of temperatures considerably above normal followed. The month as a whole averaged 1.6° above normal and precipitation was 0.12 inch below normal, however most of the rain fell as local showers, the number of rainy days being above normal. The heavier precipitation totals occurred in the southern and southeastern counties, 12.69 inches being measured at Huttig, the lighter in the northern counties. Showers, falling on wet soil, delayed farming operations and grassy cotton fields were the rule at the close of the month in southern and eastern sections of the State. In the northern and northwestern counties dry weather was favorable and work advanced accordingly.

June:– Light to moderate showers were rather frequent the first 10 days of the month, the soil continuing wet, and grassy cotton fields the rule in central and southern portions, but after the 10th hot dry weather and abundant sunshine were more favorable and in most sections of the State fields were cleaned. For the State as a whole the monthly precipitation was nearly an inch and a half below normal, but the distribution was very irregular, the northern half showing large negative departures, some southern and southwestern counties positive. Temperatures were high from the 9th to the 25th, midday temperatures of 95° to 98° occurring in all sections with 100° to 104° in some localities. The close of the month found the agricultural situation satisfactory in the northern half of the State while in the southern counties boll weevil were active and cotton conditions were not satisfactory. Rice, potatoes, truck, melons, and the peach crop were promising.

July:– Temperature and precipitation were slightly above the 30 year average but no record breaking extremes occurred. The temperature excess was greatest in the northwestern and northeastern counties while in other sections of the State both positive and negative departures occurred. The first eight days were cool, temperatures being below normal throughout the State, but thereafter temperatures were normal or above. Precipitation was below normal in the northern border counties and the Arkansas Valley, above in other sections. The weather was generally favorable for the growth of cotton, and as a rule fields were well cultivated. Hot dry weather held boll weevil in check somewhat and at the close of the month plants were fruiting satisfactorily. It was too dry for cotton in western and northern counties. Large crops of melons, cantaloupes, and peaches were harvested under favorable weather conditions.

August:– The outstanding characteristic of the weather during August was the deficiency in precipitation. The average for the State, 1.90 inches, is with but two exceptions, 1909 and 1913, the least on record. Temperatures were above normal over the greater portion of the State, the stations along the upper Arkansas recording the highest monthly means. The weather was generally unfavorable for growing crops being too dry except in a few favored localities. Despite the hot dry weather boll weevil activities continued, the damage being serious throughout most cotton growing sections of the State. Late corn was injured, especially in the uplands, and at the close of the month all crops needed rain badly.

September:– The warm dry weather of August continu through most of September. Sunshine averaged 82% of the po sible amount and the number of rainy days was only half of t normal. This was the driest September experienced since 18 and only three times during the past 31 years has so little ra fallen during the month. Unseasonably warm weather prevail from the 1st to 10th and from the 13th to the close of the mont On the 11th and 12th temperatures were somewhat belo normal, Dutton reporting light frost with a temperature of 37 A few light showers fell during the first 20 days of the mont but amounts were too light and it was too late for crops to benefited materially. Late corn, pastures, potatoes, and hay crops were damaged. At the close of the month cotton w open in most sections of the State and picking was progressi rapidly. Roads were good throughout the month and all rive were low.

October:– October was the 7th consecutive month of 19 with a temperature above normal and during this time the pr cipitation deficiency was over six inches. The dry fall was fa orable for harvesting and for most outside work, but fall plo ing was delayed, ranges were in poor condition, and in so sections stock water was scarce. The rivers of the State show lower stages than during September, the Arkansas at Litt Rock being below zero the entire month and conditions at Ca ico Rock and Georgetown on the White and at Dam No. 1 the Little Red were practically the same.

November:– November was unmarked so far as unusual weath is concerned. The precipitation was slightly above normal, t temperature 1.4° above. Killing frost occurred in most sectio from the 21st to the 26th, but did little damage as practica all growing crops were matured. The situation with regards s moisture improved and at the close of the month the soil w in excellent condition for fall plowing. Harvesting of crops w practically completed under favorable weather conditions, t rains from the 12th to the 18th interfering but little. Whea oats, meadows, and pastures were in good condition but the acreage of wheat was reduced due to the dry weather earlier the fall.

December:– The temperature for December averaged 5.7° bove normal, this being the warmest December in the Clima ological History of Arkansas and was the 9th consecutive mon of 1922 with a positive temperature departure. The month o ened with temperatures 15° to 20° above normal and unseaso ably warm weather continued the first eight days. From t 9th to the 20th temperatures were near or somewhat belo normal, from the 20th to the close of the month above. Ra occurred in all sections during the first week and showers we frequent to the 17th. From the 18th to the 25th practically rain fell, but after the 25th showers were frequent. The rainfa and mild temperatures were very favorable for wheat, oat meadows, pastures, and truck, all of which made excelle progress.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. †† Received too late to be included in means and summaries. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † also on other dates. ‡‡ Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark. Springbank, Doddridge, Ark.; Umphers, Rover, Ark. Dam No. 1, Judsonia, Ark

Correction, November, 1922. Eureka Springs, greatest 24 hour precipitation should be 1.11 on 17th

Monthly and Annual Mean Temperatures for the Year 1922, with Departures from the Normal.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., JANUARY, 1923. No. 1.

MAR 15 1923

GENERAL SUMMARY.

Remarkably mild weather prevailed throughout January, the monthly mean temperature, 48.6° being with but one exception the highest during the past 33 years. In 1907 the mean temperature for the State was 49.2°, but in 1907 there was a temperature of 8° below zero recorded at Pond and zero or lower at other stations, while during the past month the lowest temperature was 15°. Not only was the past month next to the mildest on record, but the month was even warmer than the preceding December. From the 8th to the 20th there was a daily excess of 10° to 15° throughout the State, and at the close of the month the temperature was 15° to 18° above normal. Practically no rain fell during the first 13 days of the month, but from the 19th to the close of the month rains were frequent and field work had to be stopped on account of the wet soil.

The month as a whole was favorable for agricultural pursuits. More plowing was done than is usual during January and the close of the month found all farm work well advanced. The warm weather advanced all vegetation and some apprehension was felt for the fruit crop. Wheat, oats, meadows, pastures, and truck made excellent progress and were in good condition.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 53 stations, was 48.6° which is 7.7° above normal, all stations showing positive departures. The highest monthly mean was 54.6° at Texarkana, the lowest, 43.2° at Nail. The highest temperature recorded during the month was 80° at Portland on the 14th. The lowest was 15° at Evening Shade on the 23d. The greatest daily range was 49° at Portland on the 10th.

PRECIPITATION.

The average precipitation, as determined from the records of 75 stations, was 5.78 inches which is 1.55 inches above normal. Negative departures were recorded at several stations in the southeastern counties, at a few places in the upper Arkansas Valley and at Batesville, positive in all other sections. Monthly totals ranged from 9.71 inches at Texarkana to 1.75 inches at Booneville. The greatest amount measured in 24 consecutive hours was 4.50 inches at Portland on the 30th. Five stations reported a measurable amount of snow and traces were recorded at several others. The average number of rainy days was 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determin section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randol La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Dam No. 1; Judsonia, Ark.

Daily Precipitation for January, 1923.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., FEBRUARY, 1923. No. 2.

GENERAL SUMMARY.

The month opened unseasonably warm and temperatures 10° to 25° above the seasonal average prevailed until the afternoon and night of the 3d when a cold wave overspread the State giving temperatures of 5° to 10° in the northern and northwestern counties and 18° to 20° in the southern, this being the coldest weather of the month. The cold spell was of short duration and the temperature was near normal by the 8th, but the month as a whole averaged slightly below normal, this being the first monthly mean below normal since March, 1922. The heavy rains of the latter days of January continued into February resulting in moderately high water in most rivers of the State, flood stages being reached on the White, Black, Ouachita, Petit Jean, St. Francis, and Cache. Practically all the precipitation for the month occurred from the 1st to the 13th and from the 24th to the 27th. Snow fell in most sections of the State during the first 5 days of the month, the heavier amounts occurring in southeastern counties where 7 to 7.5 inches were measured. At the close of the month farm work was further advanced than usual at this season of the year. Oats were being sown and some potatoes, truck and gardens had been planted. The cool weather checked fruit development and the crop was still uninjured.

W. C. H.

UNIVERSITY OF ILLINOIS LIBRARY

TEMPERATURE.

The mean temperature for the month of February, as determined from the records of 51 stations, was 41.9° which is 0.3° below normal. Positive departures occurred at a number of stations in the southern half of the State and at a few in the northeastern and northwestern counties, negative elsewhere. The highest monthly mean was 49.2° at Texarkana, the lowest, 34.8° at Nail. The highest temperature recorded was 80° at several stations on the 1st and 2d, the lowest, 5° at Nail on the 4th. The greatest daily range was 56° at Dodd City on the 3d.

PRECIPITATION.

The average precipitation, as determined from the records of 74 stations, was 4.66 inches which is 1.38 inches above normal. Positive departures were recorded throughout central and southern sections with negative confined principally to northeastern and northwestern counties. Monthly totals ranged from .21 inches at Grannis to 1.66 inches at Bentonville. A measurable amount of snow was reported at 48 stations averaging about 3 inches. The average number of rainy days was 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determin section means. T. Precipitation is less than 0.01 inch rain or melted snow. †Received too late to be included in means and summaries. Reference letters [a],[b],[g], appearing in table indicate number of days missing; for example, [a] represents two days missing. †Also on other dates. ††Post-office addresses of these stations as follows:- Junction, Randol La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Dodsricge, Ark.; Dam No. 1; Judsonia, Ark.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., MARCH, 1923. No. 3.

GENERAL SUMMARY.

The weather in Arkansas during the month of March, 1923, was unusually cold, being the coldest March since 1915 and one of the coldest on record. The month opened warm and temperatures were considerably above normal the first few days, but beginning about the 13th cooler weather overspread the State and sub-normal temperatures were the rule the remainder of the month. On the 18th and 19th a severe cold wave gave the lowest March temperatures on record in most sections, 2° being recorded at Nail, 10° at Fort Smith, 14° at Little Rock, and 18° to 20° to the southern border. The lowest temperature on record for March is 1° at Jonesboro and Gravette, on March 6, 1899. The cold wave of the 18th and 19th did great damage to fruit and growing crops. Peaches, plums, and pears were killed in some orchards, greatly damaged in others. Strawberries were set back at least two weeks and growing crops delayed accordingly. Apples were uninjured. The precipitation for the State was practically normal and the distribution throughout the month was rather even, the number of rainy days being normal.

Heavy rains on the 15th and 16th caused flood stages on the White, Black, Cache, Petit Jean, and a sudden rise in the Arkansas The Mississippi was at flood stage at Memphis from the 23d to the close of the month and at Helena after the 26th. There was little loss of property, the greatest damage being the delaying of farm work in the low lands in the eastern part of the State.

W. C. H.

TEMPERATURE.

The mean temperature for the month of March, as determined from the records of 52 stations, was 49.6° which is 3° below normal, all stations showing negative departures. The highest monthly mean was 56.4° at Huttig, the lowest, 42.5° at Nail. The highest temperature recorded was 88° at Portland on the 22d, the lowest, 2° at Nail on the 18th. The lowest occurred in all sections about the 18th or 19th, the highest on different dates. The greatest daily range was 52° at Evening Shade on the 19th.

PRECIPITATION.

The average precipitation for the State, as determined from the records of 74 stations, was 5.04 inches which is 0.34 inch above normal. Positive and negative departures occurred in all sections, but the lightest totals were recorded in the Arkansas Valley. Monthly totals ranged from 10.55 inches at Patterson to 2.12 inches at Fort Smith. Bentonville recorded 0.4 inch of snow and a trace was reported at several other stations, otherwise the precipitation fell as rain. The average number of rainy days was 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in deriving section means. T. Precipitation is less than 0.01 inch rain or melted snow. ‡‡Received too late to be included in means and summaries. Reference letters [a], [c], appearing in table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, [illegible] La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.; Dam No. 1; Judsonia, Ark.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., APRIL, 1923. No. 4.

GENERAL SUMMARY.

Although the mean temperature was slightly above normal and the precipitation considerably above, there were no record breaking extremes and, considered as a whole, the month was not unusual. Owing to the cool weather the last of March and the first days of April when freezing temperatures and killing frosts occurred in most sections, vegetation development was checked and the continued rainy weather kept field work somewhat behind normal seasonal advancement.

Heavy hail and wind storms did damage at different points during the month. On the afternoon of April 4th heavy hail fell at several stations, Marianna reporting stones measuring over 7 inches in circumference and at Pacahontas the worst hailstorm in many years occurred. A disastrous hailstorm, followed by heavy winds and rain, occurred April 28th in the country surrounding Dardanelle and Russellville. Hail as large as hen eggs fell and in the windstorm, houses were unroofed and damage estimated at $200,000 to $300,000 occurred. In this section 1,500 acres of cotton will have to be replanted.

W. C. H.

TEMPERATURE.

The mean temperature for the month of April, as determined from the records of 55 stations, was 61.4° which is 0.2° above normal, positive departures prevailing in all sections. The highest monthly mean was 66.4° at Junction and Portland, the lowest, 55.2° at Nail. The highest temperature recorded during the month was 95° at Calico Rock on the 24th, the lowest, 23° at Bee Branch on the 1st. Extremes occurred on approximately these dates throughout the State. The greatest daily range was 46° on the 7th at Dodd City and on the 23d at Calico Rock.

PRECIPITATION.

The average precipitation for 76 stations during the month of April was 6.30 inches which is 1.52 inches above normal. Negative departures were recorded at 12 stations, principally in the northwestern counties, positive in all other sections. Monthly totals ranged from 10.24 inches at Arkansas City to 1.87 inches at Harrison. The greatest amount measured in 24 consecutive hours was 3.90 inches at Conway on the 24th. The average number of rainy days was 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[e], appearing the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Dam No. Judsonia, Ark.; Junction, Randolph Co.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for April, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, Ark., MAY, 1923. No. 5

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during May, 1923, were the positive precipitation and the negative temperature departures. Temperatures were below normal about 20 days during the month, only slightly above at any time. A HIGH, closely following a disturbance of considerable intensity, moved southward from the Northern Plains to the West Gulf States on the 9th giving unseasonably cool weather throughout Arkansas with freezing temperatures and killing frosts at a number of northern Stations. On the 14th a disturbance moved from the Southwest northeastward across the State giving heavy rain in all sections, over nine inches falling at Hot Springs in less than 24 hours. During this downpour, between the hours of 4:00 p. m. and 8:00 p. m. May 14th, this city suffered the greatest disaster of its history. The entire business section from the junction of Park and Whittington avenues to the Citizens National Bank corner was swept by a torrent of water four to nine feet deep. The total damage is estimated at from $1,000,000 to $2,000,000, all of which resulted directly from the storm. As a result of these heavy rains the streams of the State reached flood stages, the Ouachita at Camden and the Little Red at Judsonia doing serious damage while the White, Black, Arkansas, Petit Jean, Cache, and St. Francis all reached flood stage at one or more points, flooding the lowlands and further retarding preparation for a crop. The strawberry crop was seriously damaged by the continued rains, the late berries being almost a failure. More than ten persons were injured, two severely, by a tornado which passed through southern Sevier County the afternoon of the 14th. The path was half a mile wide traveling from southwest towards the northeast. Houses, barns, crops, and timber were destroyed in its path. The damage is estimated at several thousand dollars. A tornado occurred in the west end of Little Rock about 8:00 p. m. May 14th moving from southwest towards the northeast Trees were uprooted, the Forest Park school building demolished, and dwellings damaged. On the same evening the U. M. Rose School, 13th and State streets, was struck by lightning and partly burned.

W. C. H.

TEMPERATURE.

The mean temperature for May, as determined from the records of 54 stations, was 67.2° which is 2° below normal. All stations for which normals have been computed showed negative departures except Mammoth Spring and Huttig. The highest monthly mean was 71.8° at Huttig; the lowest, 61.4° at Nail. The highest temperature recorded during the month was 98° at Malvern on the 20th, the lowest, 27° at Dutton and Gravette on the 9th.

PRECIPITATION.

The average precipitation for the State, as determined from the records of 73 stations, was 8.24 inches which is 3.12 inches above normal, all stations except Camden and Whitecliffs recording positive departures. This was the wettest May since 1907 and only four during the past 33 years have shown heavier average rainfall. Monthly totals ranged from 14.26 inches at Hot Springs to 3.55 inches at Magnolia. The greatest amount measured in 24 consecutive hours was 9.01 inches at Hot Springs on the 14th. The average number of rainy days was 12.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Dam No. 1, Judsonia, Ark.; Junction, Randolph La.; Lutherville, R.F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for May, 1923.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., JUNE, 1923. No. 6.

GENERAL SUMMARY.

There were no outstanding features characterizing the weather in Arkansas during June. As is usually the case, the precipitation was not evenly distributed, amounts varying from 1.50 inches to over 12.00 inches. The temperature averaged only 0.1° below normal and the number of clear, partly cloudy, cloudy, and rainy days was normal. There were no marked temperature departures until the close of the month when temperatures 10° to 15° below the seasonal average were recorded throughout the State. The showery weather of May continued past the middle of June in most of the cotton growing section of the State and cotton fields were not cleaned until the last of the month. Cotton made good progress and was in good condition at the close of the month, the boll weevil infestation being much less than last year. Conditions were favorable for corn and all minor crops except in the floooded lowlands. Most of the streams of the State were near flood stage at the close of May and in several instances had hardly reached a normal stage when heavy rains the 9th, 10th, and 11th brought another rise, the Arkansas, White, Black, Cache, and St. Francis going over flood stage throughout most of their courses. Lowlands were flooded, the land along the lower reaches of the White and Arkansas remaining under water for a number of days. In these areas the loss to prospective crops will be large. Losses of over $746,000 were reported along the Arkansas. The losses along the White, Black, and Cache were comparatively small as those streams were higher in May than in June. A tornado occurred at Jonesboro June 27th which did damage estimated at $7,000. A straight blow at Hoxie and Walnut Ridge on June 6th did damage to property estimated at $1,500.

W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 55 stations, was 76.7° which is 0.1° below normal, positive and negative departures occurring in all sections. The highest monthly mean was 79.8° at Osceola and Huttig; the lowest 71.4° at Nail. The highest temperature recorded during the month was 99° at a number of stations on the 26th and 27th. The lowest was 46° at Dutton on the 29th.

PRECIPITATION.

The average precipitation, for the 75 stations reporting during the month of June, was 5.20 inches which is 1.12 inches above normal. Positive and negative departures occurred in all sections. Monthly totals ranged from 12.14 inches at Marshall to 1.50 at Princeton. The greatest amount measured in 24 consecutive hours was 6.00 inches at Wynne on the 10th. The average number of rainy days was 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Dam No. Judsonia, Ark.; Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for June, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., JULY, 1923. No. 7.

GENERAL SUMMARY.

The weather during July was characterized by normal temperature, a slight deficiency in precipitation, about the normal amount of sunshine, and nearly the normal number of clear, partly cloudy, cloudy, and rainy days. The month opened with a cool wave, temperatures being 8° to 10° below normal during which time 48° was recorded in Benton County. From the 17th to the 22d and during the last few days of the month temperatures were near or slightly below normal, while during most other periods they were above normal, 105°, which is not an unusual July temperature, being the highest recorded. Little rain fell from the 1st to the 12th but thereafter moderate showers were frequent. Conditions as a whole were favorable for cotton which was rather late. Boll weevil infestation was less than a year ago and the close of the month found fields clean and the crop growing and fruiting satisfactorily. The weather was rather dry for corn in a few western and northern counties but in most sections corn did well and early corn was nearly matured at the close of the month. Melons, potatoes, rice, pastures, and truck were favorably effected and at the close of the month the early peach crop was being harvested under favorable conditions.

W. C. H.

TEMPERATURE.

The mean temperature for the month of July, as determined from the records of 51 stations, was 79.9° which is normal. There were slight positive and negative departures in all sections of the State. The highest monthly mean was 82.6° at Hope; the lowest 75.0° at Dutton. The highest temperature recorded was 105° at Hope on the 24th; the lowest 48° at Rogers on the 1st. Extremes occurred near these dates throughout the State. The greatest daily range was 42° at Harrison on the 7th.

PRECIPITATION.

The average precipitation for the State, as determined from the reports of 73 stations, was 3.53 inches which is 0.39 inch below normal. Amounts varied from 7.86 inches at Little Rock to 0.33 inch at Harrison, but considering the season, the distribution was fairly regular over the State. The greatest amount measured in 24 consecutive hours was 4.75 inches at Hot Springs on the 17th. The average number of rainy days was 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Dam No. 1 Judsonia, Ark.; Junction, Randolph, La.; Lutherville, R.F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, Ark., AUGUST, 1923. No. 8.

GENERAL SUMMARY.

The outstanding characteristics of Arkansas' weather during August, 1923, were the positive temperature and the negative precipitation departures; all stations recording monthly mean temperatures normal or above, and all except five total precipitations below normal. Temperatures were normal or above in most sections from the 1st to the 16th or 17th. On the 22d a cool wave began overspreading the State, temperatures below normal being recorded for five or six days. During this period unseasonably cool weather prevailed in all sections. Day temperatures of 100° or higher were recorded at most northern and western stations during the first half of the month, but at most stations in the southeastern fourth of the State the temperature did not reach 100°. The precipitation was mostly of the local shower type and was insufficient for agricultural needs in some western and northern counties. The number of days with 0.01 inch or more precipitation has been less in but one previous August.

High day temperatures and abundant sunshine held boll weevil and worm activity in check early in the month and cotton made satisfactory growth, however in some sections worms later did serious damage, fields being stripped of leaves and fruit. Early corn was hurt by the dry weather but late corn was uninjured except in a few isolated sections where it was too dry. Rice, meadows, potatoes, and all minor crops made satisfactory growth and were in good condition at the close of the month.

W. C. H.

TEMPERATURE.

The mean temperature for the State of Arkansas, as determined from the records of 54 stations, was 81.9° which is 2.5° above normal. All sections of the State showed positive departures, the greatest being in northern and western counties. The highest monthly mean was 85.4° at Booneville and Subiaco; the lowest 77.6° at Dutton. The highest temperature recorded was 109° at Booneville and Subiaco on the 4th and later dates. The lowest recorded was 54° at Dutton on the 24th. The lowest occurred about the 24th throughout the State, the highest on different dates. The greatest daily range was 41° at Dutton and Eureka Springs on the 29th.

PRECIPITATION.

The average precipitation for the month of August, as determined from the records of 77 stations, was 2.42 inches which is two thirds of the normal amount. Monthly totals ranged from ~~none at Fayetteville and~~ a trace at Mena to 7.68 inches at Heber Springs. Practically all sections showed negative departures. The greatest amount measured in 24 consecutive hours was 4.00 inches at Arlberg on the 22d. The average number of rainy days was 4.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., SEPTEMBER, 1923. NO. 9.

UNIVERSITY OF ILLINOIS LIBRARY
NOV 1 6 1923

GENERAL SUMMARY.

The weather during the month of September, 1923, was cool and wet, the number of rainy days large, and the sunshine only 54% of the possible amount. Of the 45 stations having normals, two thirds showed negative depratures. Although the mean for the month was about 1° below normal there were no cold periods. Minima were generally normal or somewhat above while day temperatures were considerably below normal, the daily temperature range being small. The highest temperature record-during the month, 98°, is, with but one exception, the lowest maximum for September since records have been kept, temperatures of 100° or higher having been recorded all previous Septembers with but three exceptions. The lowest recorded, 45,° is about 9° above the usual lowest for September. Normally September is a dry month, the 30 year average being 3.33 inches. The average precipitation for September, 1923, 5.56 inches, is the greatest on records since 1913 when the average was 10.10 inches, and has been exceeded but three times in the past 33 years. The 13.91 inches at Mena, though heavy, has been exceeded many times, the greatest on record being 21.95 inches at Moore, Faulkner County, in September, 1898. The heaviest totals for the month occurred in the western counties, Fulton, Mena, and Dutton measuring over 10 inches with 6 to 8 inches over the St. Francis and lower White river valleys. Most of the rain fell from the 1st to the 8th and from the 13th to the 20th. During this latter period cotton deteriorated in many sections, bolls rotting and seed sprouting in the bolls. The weather during the last decade was more favorable and much cotton was picked and ginned. Late corn made good progress throughout the State and in most sections was nearly matured at the close of the month.

W. C. H.

TEMPERATURE.

The mean temperatue for the month of September, as determined from the records of 54 stations, was 73.6° which is 0.9° below normal. Of the stations for which normals have been computed, 16 showed positive departures, 14 of these being north of the Arkansas River. The highest monthly mean was 76.1 at Grannis, the lowest, 66.6° at Dutton. The highest temperature recorded was 98° at Booneville on the 11th, the lowest, 45° at Dutton on the 23d and 24th. The greatest daily range was 40° at Mount Ida on the 9th.

PRECIPITATION.

The average precipitation for 76 stations in Arkansas during the month of September was 5.56 inches, which is 2.23 inches above normal. Practically all sections showed positive departures. Monthly totals ranged from 13.91 inches at Mena to 1.69 inches at Warren. The greatest amount measured in 24 consecutive hours was 4.80 inches at Fulton on the 5th. The number of rainy days ranged from 2 at Warren to 13 at Dumas and Lathervile, the average number being 9.

Correction: Fort Smith, August, 1923. Maximum temperature 22d should be 76. Mean maximum should be 95.9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ‡‡Received too late to be included in regular summaries. Reference letters [a,b,c] appearing in the table indicate number of days missing: for example, [a] represents two days missing. [1] Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark. † = 10-31.

Daily Precipitation for September, 1923.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., OCTOBER, 1923. No. 10.

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during October, 1923, were the low temperatures and the rather heavy rains in the border counties. Monthly mean temperatures were normal or below at all stations in the State except Hope. During the past 33 years the mean temperature for October has been lower but three times. Normally October is the driest month of the year and while this is true at a few central stations thus far this year, for most of the State it is not. The rainfall was heaviest in the northern, western, and west-central counties. In these sections cloudy rainy weather interfered seriously with harvesting and, for the State as a whole, the sunshine was deficient, there being only 12 clear days, whereas October normally has 18. Killing frost occurred at a number of stations the 22d and 23d and over most of the State the 31st, but crops were practically all matured and damage was slight. The close of the month found most cotton picked and fall plowing progressing.

Heavy rains in Oklahoma caused moderately high water in the Arkansas River, the stage being above flood at Dardanelle from the 18th to the 20th. At the State Dairy Farm, a few miles below Little Rock, caving of the river bank resulted in the loss of a barn and several acres of valuable land. Damage to crops in the lowlands was considerable.

During the crop season just closed, April 1st to October 31st, the temperature averaged about 0.5° below normal and the precipitation more than 6.00 inches above normal. Boll weevil and worms did serious damage to the cotton crop and dry weather at the critical period seriously injured early corn, especially in the western and northwestern counties. For most other crops the year was favorable.

W. C. H.

TEMPERATURE.

The mean temperature for the month of October, as determined from the records of 53 stations, was 59.2° which is 3.1° below normal, all stations for which normals have been computed showing negative departures except Hope. The highest monthly mean was 64.0° at Hope, the lowest, 53 2° at Dutton. The highest temperature recorded was 94° at Junction on the 1st, the lowest, 20° at Dutton on the 23d and at Dodd City on the 31st. Extremes occurred on approximately these dates throughout the State. The greatest daily range was 48° at Mountain Home on the 24th.

PRECIPITATION.

The average precipitation for Arkansas during the month of October, as determined from the records of 72 stations, was 3.53 inches, which is 0.53 inch above normal. Most stations in central sections of the State showed negative departures with positive prevailing elsewhere. Monthly totals ranged from 0.90 inch at Malvern to 7.34 inches at Waldron. The greatest amount measured in 24 consecutive hours was 4.48 inches at Helena on the 17th. The number of rainy days ranged from 1 at Rison to 17 at Bentonville, the average number being 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for October, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., NOVEMBER, 1923. No. 11.

GENERAL SUMMARY.

The State temperature and precipitation means were about normal during the month of November and all extremes were well within the limits established by previous records. During the first decade temperatures were below normal throughout the State and heavy to killing frosts were general, but thereafter near normal temperatures prevailed. Moderate to heavy rains occurred from the 1st to the 6th the weather being unfavorable for all outdoor work. From the 7th to the 21st but little rain occurred while from the 22d to the close of the month rains were frequent. The close of the month found most fall work well advanced, an abundance of soil moisture, and dirt roads bad, impassable in many places. An unusually heavy snow storm for the season occurred in northwestern counties on the 29th, Fayetteville reporting 8 inches, with 3 to 6 inches at several other stations. The number of clear, partly cloudy, cloudy, and rainy days was about normal and the sunshine was 58% of the possible amount.

W. C. H.

TEMPERATURE.

The mean temperature for the month of November, as determined from the records of 53 stations, was 50.8° which is 0.7° below normal. Negative departures predominated, but positive occurred at several stations in central and northeastern sections. The highest monthly mean was 54.3° at Texarkana, the lowest, 45.4° at Dutton. The highest temperature recorded was 81° at Calico Rock on the 21st, the lowest, 21° at Dutton and Gravette the 6th. Dates of extremes varied in different sections. The greatest daily range was 54° at Mount Ida on the 7th.

PRECIPITATION.

The average precipitation for the State, as determined from the records of 73 stations, was 3.34 inches, which is 0.23 inch below normal. Monthly totals ranged from 0.65 inch at Whitecliffs to 6.11 inches at Gravette. The greatest amount measured in 24 consecutive hours was 2.28 inches at Fort Smith on the 2d and 3d. The average number of rainy days was 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for November, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII LITTLE ROCK, ARK., DECEMBER, 1923. NO. 12.

GENERAL SUMMARY.

Unusually mild weather prevailed throughout most of December, the monthly mean temperature for the State, 49.1°, being the highest recorded in Arkansas during the past 34 years. The month was one of the wettest Decembers on record and the number of rainy days, 13, has not before been equalled during Arkansas' climatological history. While the month was warm and damp no extremes of temperature or precipitation occurred. The rainy weather was favorable for the growth of meadows, pastures, wheat, oats, and truck, but was unfavorable for most outdoor work. The soil was too wet for plowing most of the month and dirt roads were impassable in most sections of the State. Some clearing, fencing, and cutting timber were carried on when the weather permitted, but for the most part outdoor activities were suspended. During the last week but little rain occurred and on the 31st a cold wave overspread the State bringing the first unmistakably winter weather of the season.

W. C. H.

TEMPERATURE.

The mean temperature for the month of December, as determined from the records of 53 stations, was 49.1° which is 7.0° above normal, making this the warmest December in Arkansas since state wide records have been kept. Positive departures were recorded in all sections. The highest monthly mean was 56.2° at Junction, the lowest, 44.0° at Gravette. The highest temperature recorded was 80° at Texarkana on the 8th, the lowest, 9° at Bentonville Fayetteville, and Gravette on the 31st. The greatest daily range was 53° at Booneville on the 31st.

PRECIPITATION.

The average precipitation, as determined from the records of 72 stations, was 6.24 inches which is 2.15 inches above normal, all sections showing positive departures with the greatest monthly total occurring in southern and southwestern counties. Monthly totals ranged from 3.38 inches at Mountain Home to 11.80 inches at Magnolia. The greatest amount measured in 24 consecutive hours was 3.40 inches at Huttig on the 10th. The precipitation practically all fell as rain, only one station reporting a measurable amount of snow. The average number of rainy days was 13.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for December, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVII. LITTLE ROCK, ARK., YEAR, 1923. NO. 13.

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during 1923 were the positive precipitation departures, the unusually warm January and December, and the damaging freeze in March. Although monthly mean temperatures were above normal only four months during the year the annual mean, 61.6°, is 0.6° above the 30 year average. This was the third successive year with an annual mean above normal. Annual means ranged from 65.8° at Texarkana to 56.4° at Dutton and extremes from 109° at Booneville and Subiaco on August 4th to 2° at Nail on March 18th. Extremes occurred in all sections of the State about these dates, the March minima being the lowest on record for March at most stations. The average precipitation was 59.85 inches which is 11.92 inches above normal and is with but one exception the greatest annual precipitation total on record. Precipitation extremes ranged from 82.06 inches at Patterson to 43. 81 inches at Fort Smith. The heavier totals occurred in northeastern and northwestern counties, the lighter in the upper Arkansas Valley. It is interesting to note that the lighter totals are most often found in the upper Arkansas Valley, embracing Crawford, Sebastian, Franklin, Logan, and Johnson counties, due doubtless to the east-west range of mountains to the southward. May, with an average precipitation of 8.24 inches, was the wettest month of the year and November, with 3.34 inches, was the driest. The greatest monthly total was 14.26 inches measured at Hot Springs during May, the least, a trace at Mena during August. Of the stations reporting snowfall the average for the year was 9.0 inches, the greater part of which fell the latter part of November, 6 to 8 inches being measured in northwestern counties.

The warm weather with which the year 1922 closed continued through the month of January, 1923, this being with one exception the warmest January on record, but early in February a cold wave overspread the State and the temperature for the month as a whole was below normal, the first subnormal monthly temperature the State had experienced since March, 1922. Although for the State the monthly mean was slightly below normal several stations in the southern and a few in the northern and western counties showed positive departures.

The warm weather advanced fruit buds and vegetation beyond a normal stage and a severe cold wave in March did great damage to peaches, plums, pears, and all vegetation. This cold weather, together with the heavy precipitation in April, greatly damaged the strawberry crop. Heavy hail occurred at a number of stations during April. Marianna reporting hail stones over 7 inches in circumference and in the Dardanelle-Russellville section heavy damage was sustained. The spring months were characterized by frequent showers and excessive precipitation, resulting in freshets in the smaller streams and floods in all the rivers of the State in May and June. Heavy rain occurred in all sections on May 14th with over 9.00 inches at Hot Springs in less than 24 hours. The entire business section of the city from the junction of Park and Whittington avenues to the Citizens National Bank corner was swept by a torrent of water 4 to 9 feet deep and damage estimated at $1,500,000 was sustained. The showery weather of May continued past the middle of June and lowlands in the lower reaches of the White and Arkansas were under water for weeks. In those areas loss to prospective crops was large.

Rainfall was deficient during July and August, a condition favorable for cotton growing, but this dry spell came at a critical period for corn and early potatoes and damaged those crops. High day temperatures and abundant sunshine held boll weevil in check during August but a little later worms did serious damage, fields being stripped of leaves and fruit. August was followed by an unusually wet September and cotton deteriorated, bolls rotting and seed sprouting in the bolls. The temperature during the crop year, April 1st to October 31st, averaged 0.5° below normal and the precipitation more than 6.00 inches above normal. The first killing frost of autumn came during the last decade of October in most sections, but at this time all crops were matured and little damage was done. The growing season was approximately 215 days, about 20 days shorter than the average. There were 215 clear days during the year, 82 partly cloudy, 123 cloudy, and 102 with 0.01 inch or more precipitation. Sunshine averaged about 60% of the possible amount.

W. C. H.

WEATHER BY MONTHS.

January:— The weather during January was remarkably mild, the monthly mean temperature being nearly 8° above normal, with but one exception the warmest January experienced since state wide records have been kept. There were no low temperatures recorded at any station during the month, the lowest being 15° whereas most Januarys bring temperatures of zero or slightly lower with 10° to 15° below not unusual. Practically no rain fell during the first 13 days of the month, sunshine was abundant, and the weather more like spring than mid-winter. From the 19th to the close of the month rains were frequent and field work was halted on account of wet soil. For agricultural interests the month was favorable but vegetation and fruit advanced beyond a normal stage making the potential damage of a later freeze great.

February:— Unseasonably warm weather came to an end the 3d of February when a cold wave overspreading the State gave temperatures of 5° to 10° in the northern and 18° to 20° in the southern counties. The heavy rains continued into February resulting in moderately high water in most rivers of the State. Practically the entire monthly precipitation occurred during the first two weeks and from the 24th to the 27th of the month. There was snow during the first 5 days of the month, the heavier amounts, 7 to 8 inches, occurring in the southeastern counties. At the close of the month farm work was well advanced, oats were being sown, some truck and gardens planted, and the fruit bud development checked.

March:— The most disastrous weather of the year, so far as agricultural interests were concerned, occurred in this month. The month opened warm, temperatures being above normal for a few days but about the 13th cooler weather set in and by the 18th and 19th a severe cold wave had overspread the entire State, bringing the lowest March temperatures on record at many stations, 2° being recorded in northwestern, 10° to 14° in central, and 18° to 20° in the southern border counties. Apples had not advanced sufficiently for the crop to be seriously injured but most other fruit was damaged, the strawberry crop set back two weeks, and all growing crops delayed accord-

ingly. Heavy rains on the 15th and 16th caused flood stages on the White, Black, Cache, and Petit Jean. The Mississippi was high during most of the month, keeping much of the lowlands of the eastern counties under water.

April:— On the afternoon of the 4th heavy hail fell at a number of stations, and a disastrous hailstorm followed by heavy winds and rain occurred in the country surrounding Dardanelle and Russellville on the 28th. In this section the damage was estimated at $250,000, 1,500 acres of cotton having to be replanted. Precipitation occurred on an average 11 days during the month keeping the fields too wet to work.

May:— May was marked by a positive precipitation departure of 3.12 inches and a negative temperature of 2°. Temperatures were below normal 20 days during the month, only slightly above at any time with freezing temperatures and killing frost at several northern stations on the 9th. On the 14th excessive rains fell in all sections of the State bringing all the rivers to flood stages, seriously damaging the strawberry crop, and retarding all preparation for crops. More than 10 persons were injured by a tornado which passed through southern Sevier County the afternoon of the 14th. On this afternoon a tornado occurred in the west end of Little Rock which uprooted trees and demolished a number of building including the Forest Park school building.

June:— Heavy rains the 9th, 10th, and 11th brought the rivers to flood stages again, making the raising of a cotton crop in the lowlands of the eastern counties an impossibility. There were no marked temperature departures until the close of the month when temperatures 10° to 15° below the seasonal average were recorded throughout the State. A tornado occurred at Jonesboro the 27th which did damage estimated at $7,000 and a straight blow at Hoxie and Walnut Ridge on the 6th did damage estimated at $1,500.

July:— July was a month of normal temperature and practically normal precipitation. Little rain fell during the first 12 days of the month but thereafter showers were frequent. The weather was favorable for cotton but rather dry for corn in western and northern counties. Boll weevil were less numerous than at the same period in 1922 and the close of the month found fields clean and the crop growing and fruiting satisfactorily.

August:— The monthly mean temperature was 2.5° above normal during August, the precipitation 1.40 inches below. The number of days with 0.01 inch or more precipitation, 4, has been less in but one previous August. High day temperatures and abundant sunshine held boll weevil and worm activities in check early in the month but in the latter part of the month worms did serious damage in many fields. Earl corn was hurt by the dry weather but late corn was uninjured and all minor crops made satisfactory growth throughout the month.

September:— The weather during September was cool and the number of rainy days large. The average precipitation for September, 1923, was 5.56 inches which is 2.23 inches above normal, and with but three exceptions is the greatest September total on record. Precipitation was heaviest in western counties, Mena measuring 13.91 inches and others over 10 inches. From the 1st to the 8th and from the 13th to the 20th rain fell almost every day and cotton deteriorated, bolls rotting and seed sprouting in the bolls.

October:— The outstanding characteristics of the weather during October were the low temperatures and the heavy rains in the border counties. During the past 33 years but 3 Octobers have been cooler. Cloudy, rainy weather interfered with harvesting. Killing frost occurred at a number of stations the 22d and 23d and over most of the State the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record: but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. †† Received too late to be included in means and summaries. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † also on other dates. ‡‡ Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R. F. D. No. 2, Lamar, Ark. Springbank, Doddridge, Ark.; Umphers, Rover, Ark.

Monthly and Annual Mean Temperatures for the Year 1923, with Departures from the Normal.

Departures from the normal precipitation are based on records of ten or more years.

Continued from page 50.

November— From the 1st to the 6th and from the 22d to the close of the month rains were frequent and but little outdoor work was done while during the remainder of the month conditions were favorable. An unusually heavy snow storm for November occurred in northwestern counties on the 20th, 6 to 8 inches being reported at numerous stations.

December:— Unusually mild weather prevailed throughout most of December, the monthly mean, 49.1° being the highest recorded in Arkansas during the past 34 years. The month was one of the wettest Decembers on record and the number of rainy days, 13, has not been exceeded. On the 31st a cold wave overspread the State bringing the first winter weather of the season.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., JANUARY, 1924. NO. 1.

GENERAL SUMMARY.

January was a month of moderately cold weather, the mean temperature, 36.1°, being the lowest January mean since 1918 when all previous records were broken, that mean being 27.3° with 23° below zero recorded at Mommoth Spring. The year 1924 opened with temperatures 10° to 16° below normal and by the 6th a cold wave had overspread the entire State bringing temperatures 0° to -6° in northern and northwestern counties and 10° to 12° to the southern border. These were the lowest temperatures recorded in all sections since 1918 and the first zeroes since February, 1921. Precipitation averaged 75% of the normal amount and was mostly in the form of rain. Although the monthly total was below normal there was the normal number of rainy days, precipitation being distributed throughout the month. The ground was frozen in all parts of the State during the first decade and remained frozen in the northern and central counties during practically the entire month. The cold weather together with the frequent rains kept dirt roads impassable throughout the month and fields too wet for plowing, the result being that little farm or outdoor work was done. In some southern and central counties oats were damaged by the freeze the 6th though probably not seriously. Conditions were favorable throughout the month for wheat, rye, meadows, and fruit and the close of the month found all in excellent condition.

W. C. B

TEMPERATURE.

The mean temperature for the State, as determined from the records of 54 stations, was 36.1° which is 4.8° below normal, all stations showing negative departures. The highest monthly mean was 42.5° at Huttig, the lowest 29.0° at Nail. The highest temperature recorded during the month was 79° at Rison on the 31st, the lowest, -6° at Eureka Springs, Mountain Home, and Rogers on the 5th. Extremes occurred on approximately these dates throughout the State.

PRECIPITATION.

The average precipitation for the month of January, as determined from the records of 74 stations was 3.19 inches which is 1.04 inches less than normal. Stations lying between the Ouachita and the Red rivers showed positive departures while in other sections of the State negative departures were recorded with but two exceptions. Monthly totals ranged from 6 50 inches at Warren to 1.50 inches at Searcy. The greatest amount falling in 24 consecutive hours was 2.00 inches at Magnolia on the 15th. An appreciable amount of snow was recorded at 24 stations and averaged 1.4 inches. The average number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ‡‡Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for January, 1924.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., FEBRUARY, 1924. No. 2.

GENERAL SUMMARY.

Although the month as a whole was slightly above normal with regards temperature a Cold Wave during the first decade brought the lowest February temperature recorded since 1919. The month opened warm, temperatures being 10° to 20° above the seasonal average throughout the State, but by the 5th unseasonably cold weather had overspread the State and temperatures continued low until the 11th. During this period, temperatures of 16° to 18° were recorded to the southern border counties and — 7° at Gravette, Benton County. From the 12th to the 16th temperatures were again above normal while during the remainder of the month near or slightly below. The number of rainy days was normal, but the monthly totals were in most instances considerably below normal, the average for the State being only 2 26 inches or 1.02 inches below normal. Some plowing was done but frequent rains kept the soil too wet during most of the month. The Cold Wave the first of the month and the cool weather during the last decade kept most fruit dormant and at the close of the month no damage had occurred. Wheat and rye were usually in good condition, but oats were damaged by the freezing weather of the first decade and in many sections were reported in poor to fair condition. Dirt roads were bad during most of the month, impassable in many sections.

W. C. H.

TEMPERATURE.

The mean tempereature for the month of February, as determined from the records of 50 stations, was 42.9° which is 0.7° above normal, positive and negative departures occurring in all sections. The highest monthly mean was 48.2° at Huttig, the lowest, 37.6° at Dutton and Nail. The highest temperature recorded was 82° at Subiaco on the 14th, the lowest, — 7° at Gravette on the 6th. Extremes occurred on approximately these dates throughout the State. The greatest daily range was 50° at Mammoth Spring on the 2d and Evening Shade on the 13th.

PRECIPITATION.

The average precipitation for the State, as determined from the records of 70 stations, was 2.26 inches, which amount is a deficiency of 1.02 inches. The greatest monthly totals occurred in southeastern counties, the lighter in northwestern. The greatest monthly amount was 6.36 inches measured at Portland, the least, 0.60 inch at Fayetteville. A measurable amount of snow fell at 15 stations, averaging 1.7 inches. The greatest 24 hour precipitation was 2.52 inches at Lambrook on the 23d. The average number of days with 0.01 inch or more precipitation was 7.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Sleet:- 4th, 3; 5th, 3; 11th, 2; 22d, 4; 23d, 2; 26th, 2.
Thunderstorms:- 3d, 8; 4th, 17; 11th, 1.
Dense Fog:- 12th, 2; 16th, 1; 17th, 1; 18th, 2; 23d, 1.
Solar Halos:- 7th, 1.
Lunar Halos:- 28th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. **T.** Precipitation is less than 0.01 inch rain or melted snow. †Received too late to be included in means and summaries. Reference letters [a],[b],[d], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for February, 1924.
